1 Introduction to SCM-Series Machine Vision Cameras

1.1 Product description

The cameras mentioned in this manual are imaging capture devices which use USB3.0 to transmit uncompressed images in real time. They support image acquisition and parameter setting (such as working mode, image parameter adjustment etc.) through client-side user-friendly software.

IUX series is USB3.0 interface cameras for industrial applications. It includes IUA, IUB and IUC. IUA is mainly for the 1.1" sensor, IUB is mainly for the GSENSE sensor and IUC is for the APS and full frame sensor(2.7").

KMA means black/white camera and KPA means color camera which having built-in hardware ISP to ensure color reproduction and higher video speed. The resolution coverage is from 1.7MP to 43MP.

1.2 Characteristics

- Sony Exmor back-illuminated CMOS sensor;
- Two-step noise reduction technology;
- Ultra-high sensitivity and low noise;
- USB 3.0 data transmission interface compatible with USB2.0 protocol;
- Provides advanced video and image processing application software EHDView, compatible with Windows/Linux/OSX multi-platform SDK, support native C/C++, C#/VB.Net, DirectShow, Twain API;
- Supports external triggering, digital I/O and free-running modes;
- Supports ROI, flip, bit-depth switching and other features;
- Compliant with CE, FCC, RoHS requirements.

1.3 IUA series camera specifications

Model Number	Image Sensor	Pixel Size(μm)	G Sensitivity/Dark Signal	FPS/Resolution	Binning	Exposure Time

SCM455-C-TR IUC60000KPA	60.0M/IMX455 (C,RS) 2.7“ (9568x6380, Full Frame)	3.76x3.76	TBD	TBD	TBD	TBD

M: Monochromatic; C: Color; RS: Rolling Shutter; GS: Global Shutter.

1.6 IUA series technical specifications

1.6.1 SCM432-M-TR (Art. IUA1700KMA)

Parameter	Model SCM432-M-TR 1.7M pixel 1.1 "CMOS USB3.0 industrial camera
Camera	
Sensor model	Sony IMX432LLJ
Pixel size	9.0 μm x 9.0 μm
Sensor size	1.1"
Frame rate	98.6fps@1600 x 1100
Dynamic range	71dB
Signal-to-Noise ratio	40dB
Sensitivity	8100mV
Dark current	0.3mV
Gain range	1x-50x
Exposure time	6 μs -15sec
Shutter	Global Shutter
Binning	Software2x2, 3x3, 4x4
Data interface	USB3.0 (USB3.1 GEN1)
Digital I/O	One optical-coupling isolated input, one optical-coupling isolated output, tow non-isolated input and output
Data Format	Mono8 / Mono12
General Specifications	
Power supply	Power with USB3.0/ 5V Power adapter
Power consumption	<4.1W
Temperature	Working temperature -10~50°C; Storage temperature -30~70°C
Humidity	20% - 80% No condensation
Size	68mmx68mmx28.1mm
Weight	228g
Lens mount	C-mount
Software	EHDView/SDK
Operating system	Win32/WinRT/Linux/macOS/Android
Certification	CE, FCC, RoHS

1.6.2 SCM432-C-TR (Art. IUA1700KPA)

Model	SCM432-C-TR
Parameter	1.7M pixels 1.1" CMOS USB3.0 industrial camera
Camera	
Sensor model	Sony IMX432LQJ
Pixel size	9.0 μm x 9.0 μm
Sensor size	1.1"
Frame rate	98.6fps@1600 x 1100
Dynamic range	75dB
Signal-to-Noise ratio	40dB
Sensitivity	4910mV
Dark current	0.3mV
Gain range	1x-50x
Exposure time	6 μs -15sec
Shutter	Global shutter
Binning	Software2x2, 3x3, 4x4
Data interface	USB3.0 (USB3.1 GEN1)
Digital I/O	One optical-coupling isolated input, one optical-coupling isolated output, tow non-isolated input and output
Data Format	RAW8/RAW12/RGB8/RGB24/RGB32/RGB48
General specification	
Power supply	Power with USB3.0/ 5V Power adapter
Power consumption	<4.1W
Temperature	Working temperature -10~50°C, storage temperature -30~70°C
Humidity	20%-80%, no condensation
Size	68mmx68mmx28.1mm
Weight	228g
Lens mount	C-mount
Software	EHDView/ SDK
Operating system	Win32/WinRT/Linux/macOS/Android
Certification	CE, FCC, RoHS

1.6.3 SCM178-M-TR (Art. IUA6300KMA)

Model	SCM178-M-TR
Parameter	6.3M pixels 1/1.8" CMOS USB3.0 industrial camera
Camera	
Sensor model	Sony IMX178LLJ
Pixel size	2.4 μm x 2.4 μm
Sensor size	1/1.8"
Frame rate	59.9fps@3072 x 2048, 59.9fps@1536 x 1024
Dynamic range	71dB
Signal-to-Noise ratio	40dB
Sensitivity	760mV
Dark current	0.15mV
Gain range	1x-50x
Exposure time	20 μs -15sec
Shutter	Rolling shutter
Binning	Hardware 2x2; Software 2x2, 3x3, 4x4
Data interface	USB3.0 (USB3.1 GEN1)
Digital I/O	One optical-coupling isolated input, one optical-coupling isolated output, tow non-isolated input and output
Data format	Mono8 / Mono12
General specification	
Power supply	Power with USB3.0
Power consumption	<3.2W
Temperature	Working temperature -10~50°C, storage temperature-30~70°C
Humidity	20%-80%, no condensation
Size	68mmx68mmx28.1mm
Weight	217g
Lens mount	C-mount
Software	EHDView/ SDK
Operating system	Win32/WinRT/Linux/macOS/Android
Certification	CE, FCC, RoHS

Camera		
Sensor model	GSENSE2020s	
Pixel size	6.5 μm x 6.5 μm	
Sensor size	1.2"	
Frame rate	45fps@2048 x 2046, 45fps@1024 x 1022	
Dynamic range	66.6dB (LG), 59.5dB (HG), 87.5dB (HDR)	
Signal-to-Noise ratio	46dB (LG), 32dB (HG)	
Sensitivity	$8.11 \times 10^7 e^-/((W/m^2) \cdot s)$	
Dark current	7e^-/s/pix	
Gain range	1x-22x	
Exposure time	60s	
Shutter	Rolling shutter	
Binning	Software 2x2, 3x3, 4x4	
Data interface	USB3.0 (USB3.1 GEN1)	
Digital I/O	One optical-coupling isolated input, one optical-coupling isolated output, tow non-isolated input and output	
Data format	Mono8 / Mono12	
General specification		
Power supply	Power with USB3.0/ 12V Power adapter	
Power consumption	<3.7W	
Temperature	Working temperature -10~50°C, storage temperature-30~70°C	
Humidity	20%-80%, no condensation	
Size	118mmx68mmx23.2mm	
Weight	633g	
Lens mount	C-mount	
Software	EHDView/ SDK	
Operating system	Win32/WinRT/Linux/macOS/Android	
Certification	CE, FCC, RoHS

1.7.2 SCM2020-UV-TR (Art. IUB4200KMB)

Model	SCM2020-UV-TR
Parameter	4.2M pixels 1.2" CMOS USB3.0 industrial camera
Camera	
Sensor model	GSENSE2020BSI
Pixel size	6.5 μm x 6.5 μm
Sensor size	1.2"
Frame rate	43.6fps@2048 x 2046, 43.6fps@1024 x 1022
Dynamic range	67.5dB (LG), 61dB (HG), 90.7dB (HDR)
Signal-to-Noise ratio	47dB (LG), 32dB (HG)
Sensitivity	1.1x10 ⁸ e ⁻ /((W/m ²)·s)
Dark current	80e ⁻ /s/pix
Gain range	1x-50x
Exposure time	60s
Shutter	Rolling shutter
Binning	Software 2x2, 3x3, 4x4
Data interface	USB3.0 (USB3.1 GEN1)
Digital I/O	One optical-coupling isolated input, one optical-coupling isolated output, tow non-isolated input and output
Data format	Mono8 / Mono12
General specification	
Power supply	Power with USB3.0/ 12V Power adapter
Power consumption	<3.7W
Temperature	Working temperature -10~50°C, storage temperature30~70°C
Humidity	20%-80%, no condensation
Size	118mmx68mmx23.2mm
Weight	633g
Lens mount	C-mount
Software	EHDView/ SDK
Operating system	Win32/WinRT/Linux/macOS/Android
Certification	CE, FCC, RoHS

2 Camera Dimension and Interface

2.1 IUA series camera dimensions and outputs

2.1.1 IUA series camera mechanical housing dimensions

Figure 2-1 IUA series camera

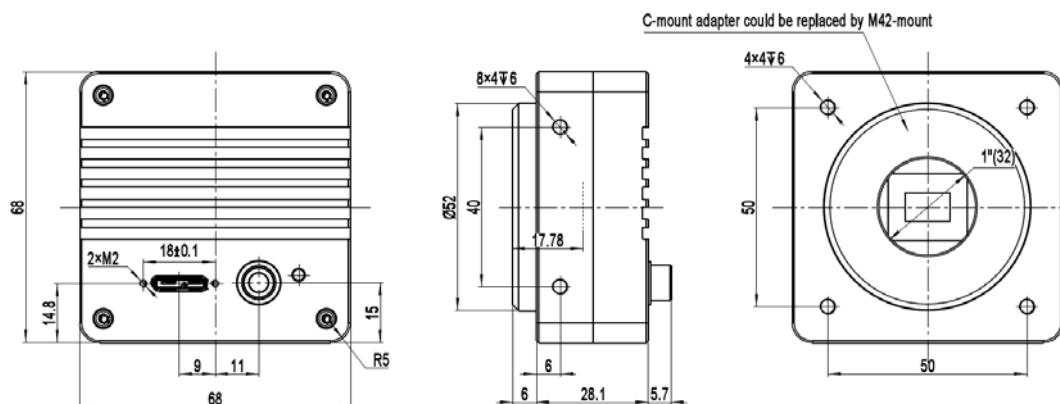

Figure 2-2 Dimensions of IUA camera housing (mm)

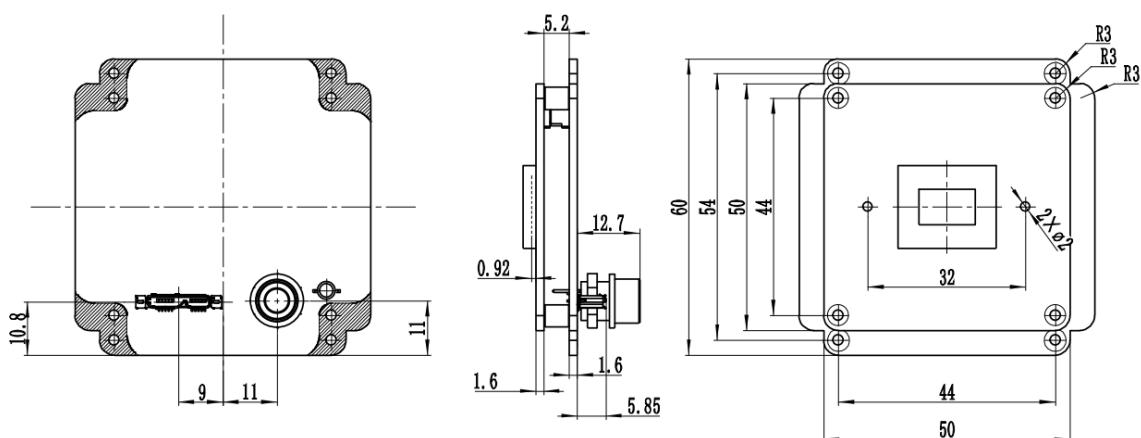

Figure 2-3 Dimensions of IUA circuit board (mm)

2.1.2 IUA series camera interface

The back of the industrial camera is shown in Figure 2-4. It has standard USB3.0 output, 7 Pin I/O port (aviation head) and on/off indicator. It has two M2 screw holes on both sides of USB 3.0 port to fix the cable. The holes reduce cable loosening caused by field vibration.

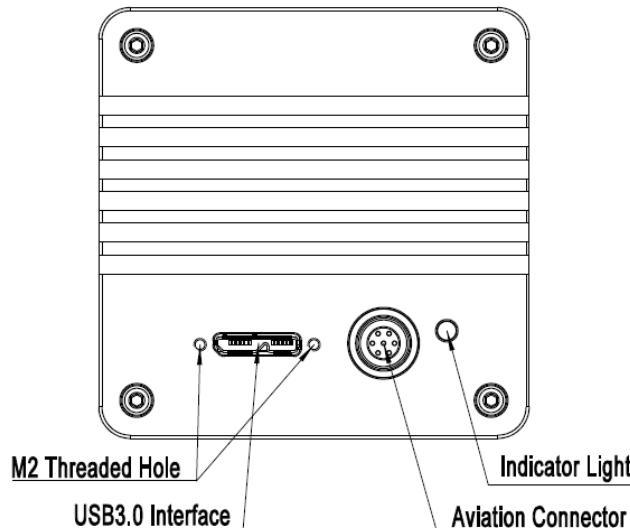

Figure 2-4 Schematic diagram of IUA camera back panel

2.1.3 IUA series camera power supply and I/O connector

The pin signal definition for the IUA series camera 7 Pin I/O connector is shown in Table 2-1.

	Color	Pin	Signal	Signal description
	White	1	GND	Direct-coupled signal ground
	Red	2	5V	5VDC power input or output
	Blue	3	OPTO_GND	Opto-isolated signal ground
	Yellow	4	DIR_GPIO1	Direct-coupled General Purpose I/O (Software configurable input/output) (line2) EHDView GPIO1=GPIO0
	Black	5	DIR_GPIO2	Direct-coupled General Purpose I/O (Software configurable input/output) (line3) EHDView GPIO1=GPIO0
	Green	6	OPTO_IN	Opto-isolated input signal (line0)
	Pink	7	OPTO_OUT	Opto-isolated output signal (line1)

Table 2-1 IUA series pin signal definition

2.1.4 IUA series camera packing information

For normal use of industrial cameras, please prepare the required accessories as shown in Table 2-2 before installation.

Order number	Accessories name	Quantity	Instruction
1	Camera	1	Camera referred in this manual
2	I/O cable	1	7 Pin cable or extended cable
3	USB3.0 cable	1	Suitable length of Micro USB3.0 cable
4	Lens (optional)	1	C-mount lens

Table 2-2 Recommended accessories

2.2 IUB series camera dimensions and outputs

2.2.1 IUB series camera mechanical housing dimensions

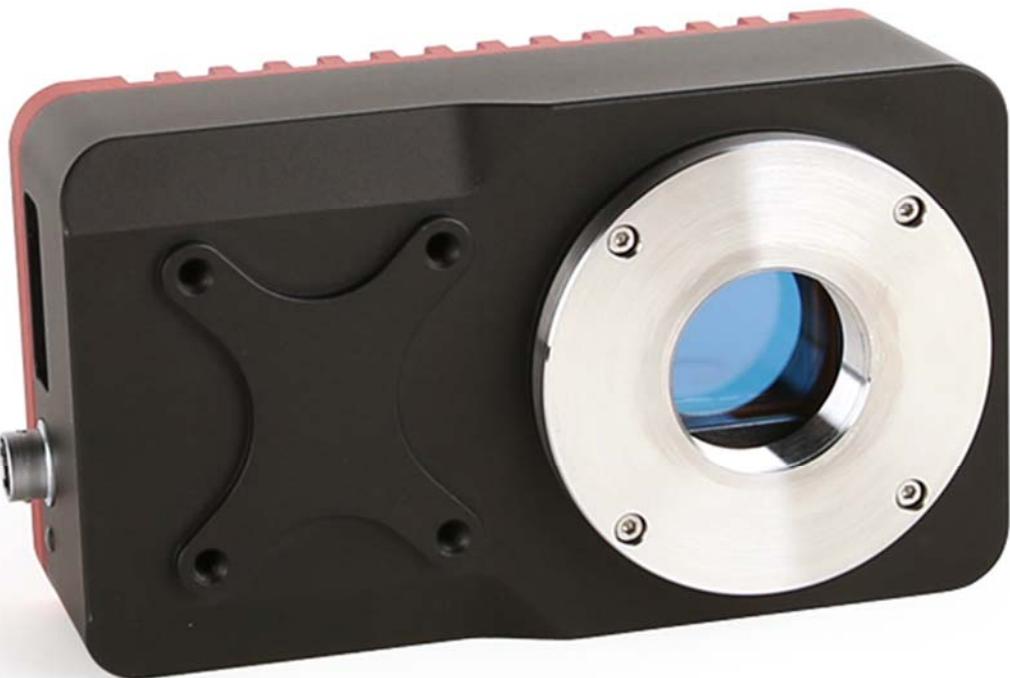

Figure 2-5 IUB series camera

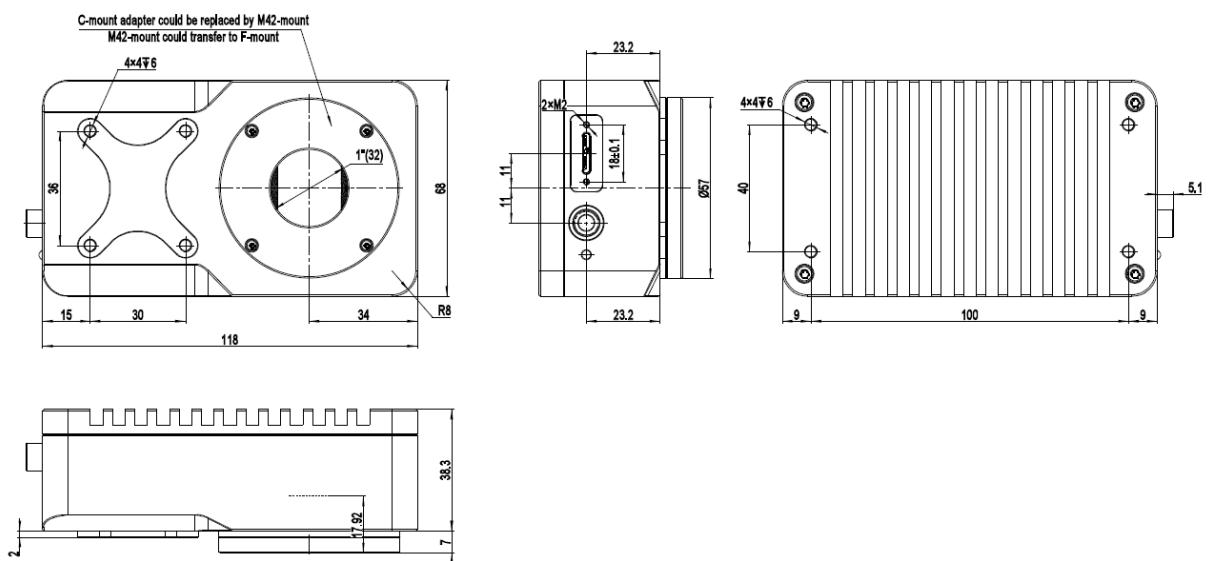

Figure 2-6 Dimensions of IUB camera housing (mm)

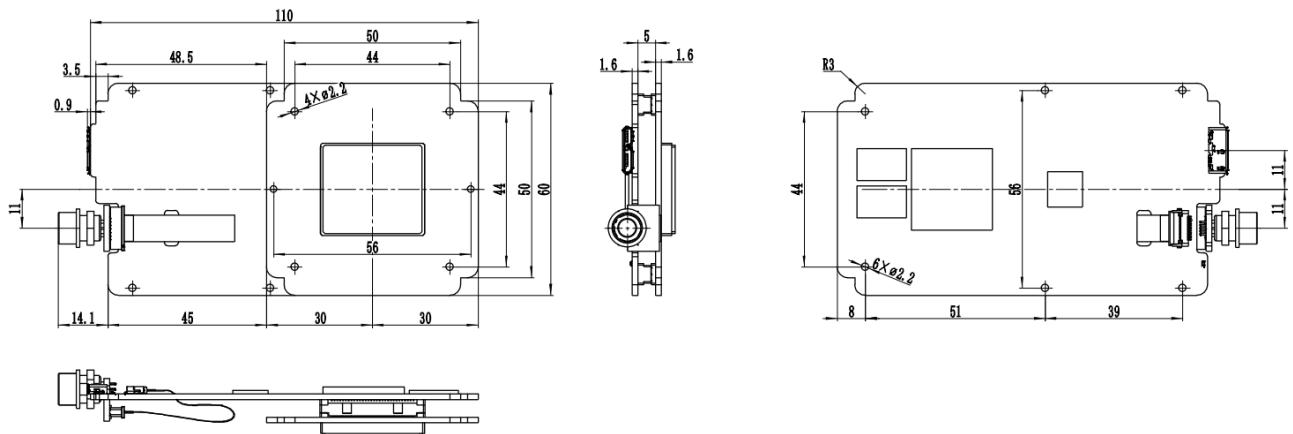

Figure 2-7 Dimensions of IUB circuit board (mm)

2.2.2 IUB series camera interface

The back of the industrial camera is shown in Figure 2-8. It has standard USB3.0 output, 7 Pin I/O port (aviation head) and on/off indicator. It has two M2 screw holes on both sides of USB 3.0 port to fix the cable. The holes reduce cable loosening caused by field vibration.

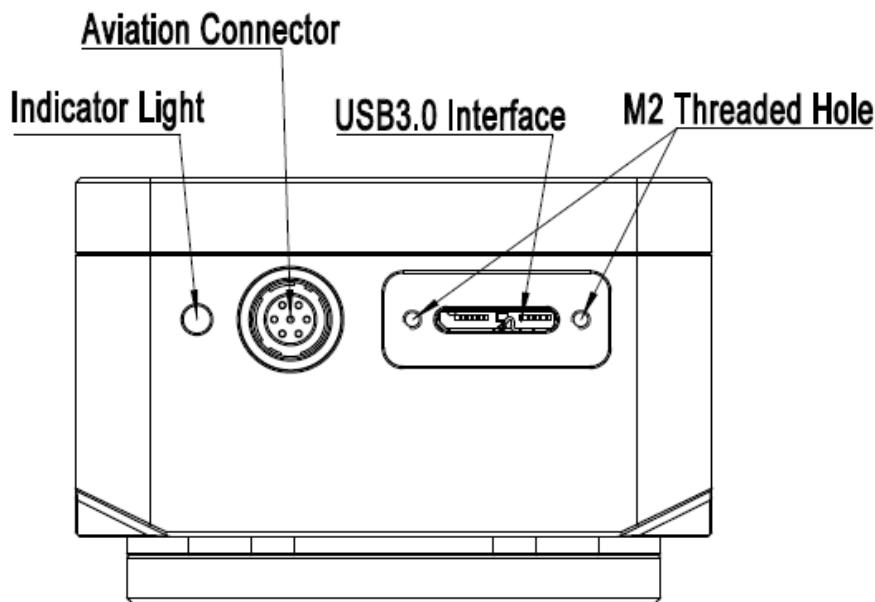

Figure 2-8 Schematic diagram of IUB camera back panel

2.2.3 IUB series camera power supply and I/O connector

The pin signal definition for the IUB, IUC series camera 7 Pin I/O connector is shown in Table 2-3.

	Color	Pin	Signal	Signal description
	White	1	GND	Direct-coupled signal ground
	Red	2	12V	12VDC power input or output
	Blue	3	OPTO_GND	Opto-isolated signal ground
	Yellow	4	DIR_GPIO1	Direct-coupled General Purpose I/O (Software config input/output) (line2) GPIO0
	Black	5	DIR_GPIO2	Direct-coupled General Purpose I/O (Software config input/output) (line3) GPIO1
	Green	6	OPTO_IN	Opto-isolated input signal (line0)
	Pink	7	OPTO_OUT	Opto-isolated output signal (line1)

Table 2-3 IUB series pin signal definitions

2.2.4 IUB series camera packing information

For normal use of industrial cameras, please prepare the required accessories as shown in Table 2-4 before installation.

Order number	Accessories name	Quantity	Instruction
1	Camera	1	Camera referred in this manual
2	I/O cable	1	7 Pin cable or extended cable
3	USB3.0 cable	1	Suitable length of Micro USB3.0 cable
4	Power (IUB)	1	IUB series of power adapters
5	Lens (optional)	1	C-mount lens

Table 2-4 Recommended accessories

2.3 IUC series camera dimensions and outputs

2.3.1 IUC series camera mechanical housing dimensions

Figure 2-9 IUC series camera

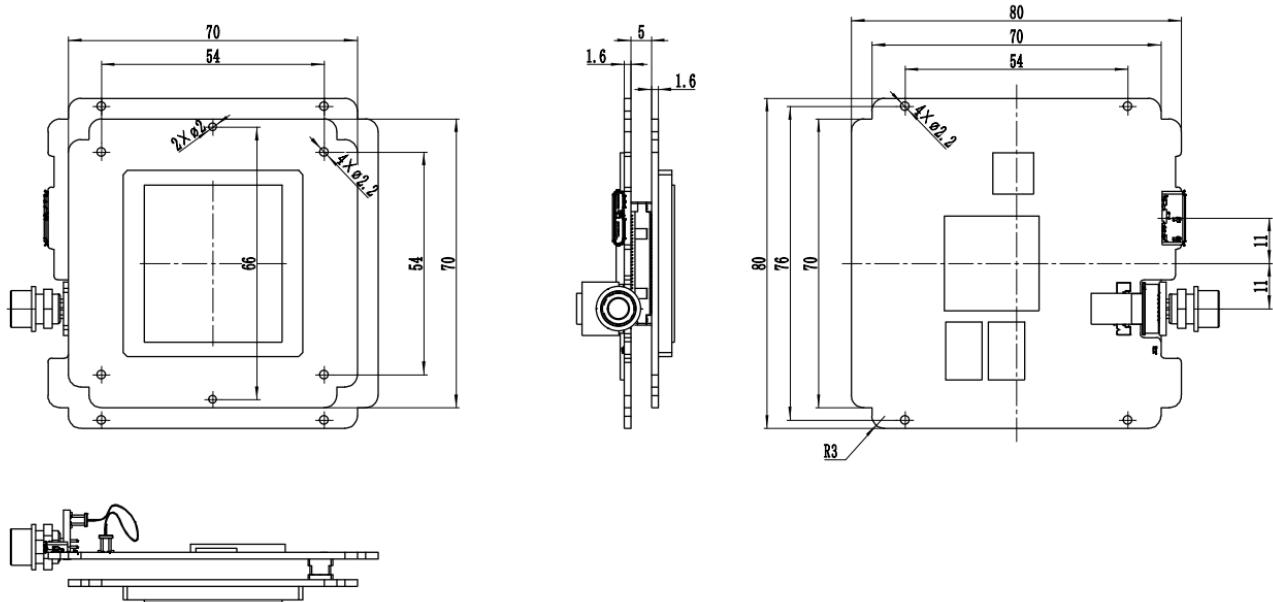

Figure 2-11 Dimensions of IUC circuit board (mm)

2.3.2 IUC series camera interface

The back of the industrial camera is shown in Figure 2-12. It has standard USB3.0 output, 7 Pin I/O port (aviation head) and on/off indicator. It has two M2 screw holes on both sides of USB 3.0 port to fix the cable. The holes reduce cable loosening caused by field vibration.

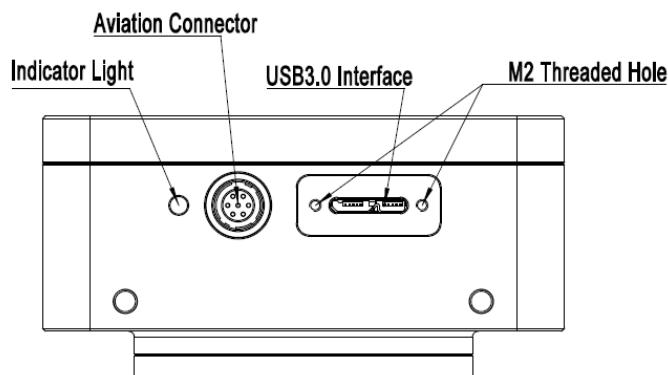

Figure 2-12 Schematic diagram of IUC camera back panel

2.3.3 IUC series camera power supply and I/O connector

The pin signal definition for the IUC series camera 7 Pin I/O connector is shown in Table 2-5.

	Color	Pin	Signal	Signal description
White	1	GND	Direct-coupled signal ground	
Red	2	12V	12VDC power input or output	
Blue	3	OPTO_GND	Opto-isolated signal ground	
Yellow	4	DIR_GPIO1	Direct-coupled General Purpose I/O (Software config input/output) (line2) GPIO0	
Black	5	DIR_GPIO2	Direct-coupled General Purpose I/O (Software config input/output) (line3) GPIO1	
Green	6	OPTO_IN	Opto-isolated input signal (line0)	
Pink	7	OPTO_OUT	Opto-isolated output signal (line1)	

Table 2-5 IUC series pin signal definitions

2.3.4 IUC series camera packing information

For normal use of industrial cameras, please prepare the required accessories as shown in Table 2-6 before installation.

Order number	Accessories name	Quantity	Instruction
1	Camera	1	Camera referred in this manual
2	I/O cable	1	7 Pin cable or extended cable
3	USB3.0 cable	1	Suitable length of Micro USB3.0 cable
4	Power (IUC)	1	Power adapter for IUC series
5	Lens (optional)	1	C-mount lens

Table 2-6 Recommended accessories

3 Description of Software Development

3.1 SDK introduction

3.1.1 SDK support platform

- Win32:
 - x86: XP SP3 and above versions; CPU needs to support the SSE2 instruction set at least
 - x64: Win7 and above versions
 - arm: Win10 and above versions
 - arm64: Win10 and above versions
- WinRT: x86, x64, arm, arm64; Windows 10 or above versions
- macOS: x86 and x64 bundle; macOS 10.10 or above versions
- Linux: core 2.6.27 and above versions
 - x86: CPU needs to support at least SSE3 instruction sets; GLIBC 2.8 and above
 - x64: GLIBC 2.14 and above versions
 - armel: GLIBC 2.17 and above versions. Compiled by toolchain arm-linux-gnueabi (version 4.9.2)
 - armhf: GLIBC 2.17 and above versions; Compiled by toolchain arm-linux-gnueabihf (version 4.9.2)
 - arm64: GLIBC 2.17 and above versions; Compiled by toolchain aarch64-linux-gnu (version 4.9.2)
- Android: arm, arm64, x86, x64; Compiled by android-ndk-r18b.

3.1.2 SDK content brief introduction

EHD-SCM series cameras support a variety of API, including: Native C/C++, .NET / C#VB.NET, DirectShow, Twain, LabView and so on. Compared with other API, as the low-level API, native C/C++ API is characterized by using pure C/C++ development, independent of other runtime libraries, having simple interface and flexible control. This SDK package contains all the resources and information you need to use, as follows:

- inc:
 - toupcam.h, C/C++ Header file.
- win: Microsoft Windows Platform file
 - ✧ **dotnet:**
toupcam.cs, Support for C#. toupcam.cs, use P/Invoke to call to toupcam.dll. Please copy toupcam.cs to your C # project.
toupcam.vb, Support for VB.NET. toupcam.vb uses P/Invoke to call to toupcam.dll.
Please copy toupcam.vb to your VB.NET project
 - ✧ **x86:**
toupcam.lib, x86 lib file.
toupcam.dll, x86 dynamic library files.
democpp.exe, x86 C++ demo execute the procedure.
 - ✧ **x64:**
toupcam.lib, x64 lib file.
toupcam.dll, x64 dynamic library files.
democpp.exe, x64 C++ demo execute the procedure.
 - ✧ **arm:**
toupcam.lib, arm lib file.
toupcam.dll, arm dynamic library files.
 - ✧ **arm64:**
toupcam.lib, arm64 lib file.
toupcam.dll, arm64 dynamic library files.

❖ **winrt:**

They can be applied for Dynamic library files of WinRT/ UWP (Universal Windows Platform)/ Windows Store App. They are compatible with Windows Runtime and can be referenced by the Universal Windows Platform app. If you use C# to develop UWP, you can use the toupcam.cs to wrap class.

❖ *Please pay attention to the DeviceCapability of uwp. Refer to How to add USB device capabilities to the app manifest. (Microsoft seems to limit the Device entry under DeviceCapability to no more than 100) demouwp.zip is a simple example of uwp. Please modify vid and pid. under DeviceCapability in the file Package.appxmanifest before compiling the run example.*

❖ *drivers: (Cameras produced after 2017.1.1 support WinUSB. You no longer need to install drivers on Windows8 and above)*

The x86 folder contains the kernel state driver file for x86, including toupcam.cat, toupcam.inf and toupcam.sys.

The x64 folder contains the kernel state driver file for x64, including toupcam.cat, toupcam.inf and toupcam.sys

❖ **samples:**

1.democpp, take C++ for example. This example shows an enumeration device, an open device, a preview video, a snap image, a set resolution, a trigger and a wide variety of picture formats (bmp, jpg, png etc.) save the image to the file, wmv format video, trigger mode, I/O control, etc. This example uses the Pull Mode mechanism. In order to keep the code clean, the WTL library used by the example can be downloaded from this link <http://sourceforge.net/projects/wtl/>

2.demopush, take C++ for example, using the Push Mode mechanism, StartPushModeV3

3.demomfc, A simple C++ example. it uses MFC as the GUI library, supports opening devices, previews video, captures images, sets resolution and saves images to files in a variety of image formats (.bmp, .jpg, .png, etc.). This example uses the Pull Mode mechanism.

4.demowinformes1, take C# winform for example. It supports to open the device, preview video, capture images, save pictures to files and set white balance. This example uses the PullMode mechanism, called StartPullModeWithWndMsg.

5.demowinformes2, take C# winform for example. It supports to open the device, preview video, capture images, save pictures to files, set white balance. This example uses the Pull Mode mechanism called StartPullModeWithCallback

6.demowinformes3, take C# winform for example. It supports to open the device, preview video, capture images, save pictures to files, set white balance. This example uses the Push Mode mechanism called StartPushMode

7.demowinformvb, take VB.NET winform for example. It supports to open the device, preview video, capture images, save pictures to files and set white balance. This example uses the Pull Mode mechanism.

● **linux: Linux platform file**

Udev: 99-toupcam.rules, udev rule file

Please refer to: http://reactivated.net/writing_udev_rules.html

❖ *c#: toupcam.cs, Support. Net Core C#. toupcam.cs calls to libtoupcam.so. using P/Invoke Please copy toupcam.cs to your C# project.*

❖ *x86: libtoupcam.so, X86 version of so file.*

❖ *x64: libtoupcam.so, x64 version of so file.*

❖ *armel: libtoupcam.so, armel version so file, toolchain is arm-linux-gnueabi*

❖ *armhf: libtoupcam.so, armhf version so file, toolchain is arm-linux-gnueabihf*

❖ *arm64: libtoupcam.so, Arm64 version so file, toolchain is aarch64-linux-gnu*

● **android: Android platform. libtoupcam.so. for the four architectures of arm, arm64, x86, x64**

- mac: macOS platform file
- python: toupcam.py and example code.
- java: toupcam.java and example code(Console and Swing)
- doc: SDK uses documentation, simplified Chinese, English.
- sample:
 - ◊ *demosimplest, the simplest example is about 60 lines of code.*
 - ◊ *demoraw, RAW data and static capture, about 120 lines of code.*
- extras:
 - ◊ *directshow: DirectShow SDK and demo programs.*
 - ◊ *twain: TWAIN SDK*
 - ◊ *labview: Labview SDK and demo programs.*
 - ◊ *MATLAB: MATLAB demo programs.*

3.2 Client democpp description

As shown in Figure 3-1, “1” is the control menu area and "2" is the video display area.

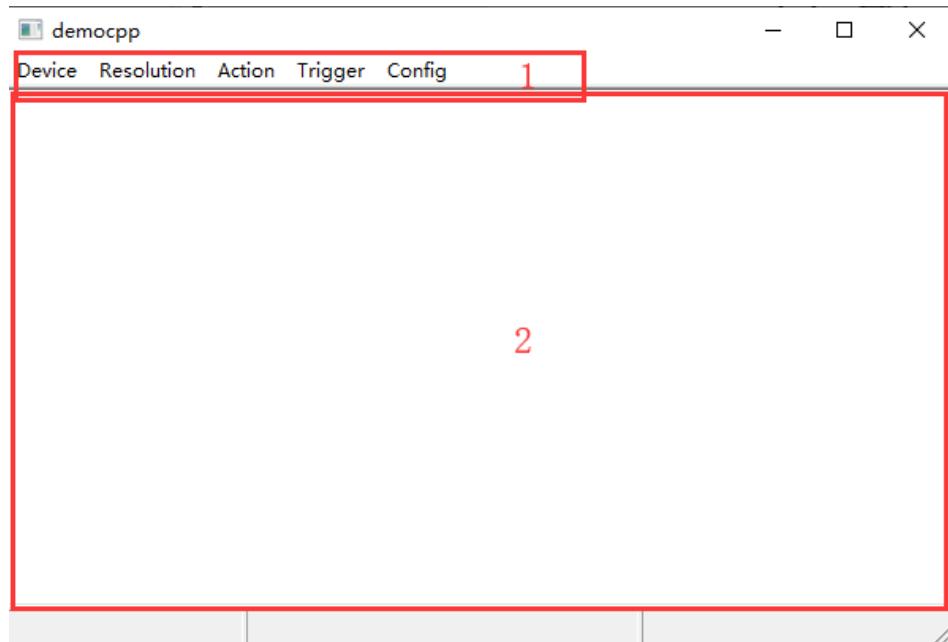

Figure 3-1 democpp interface

The main features of the control menu are:

Device: camera names installed are listed under this menu. Clicking the camera name to open the camera;

Resolution: switch the resolution and capture the image;

Action: Pause, ROI setting, test image, read firmware version number, hardware version number, production date, etc.

Trigger: Defining the trigger mode, the I/O port setting and the like;

Config: Set exposure, gain, white balance, frame rate, etc.

3.3 EHDView UI description

EHDView software fully controls all camera features and streams high-speed videos by USB port using Ultra Fine™ color engine. Ultra Fine™ color engine contains excellent procedure of processing RAW data and thus realizes the conversion of sensor detected data to image. Furthermore, ToupView also provides many advanced video and image processing features, such as image gray level correction, 2D measurement, stitching, depth of field extension,

EHD imaging GmbH SCM-Series User Manual for Machine Vision Cameras

video watermarking, color synthesis, image segmentation and counting and so on. EHDView's multilingual environment can support any language and currently includes, but is not limited to, English, simplified Chinese, traditional Chinese, German, Japanese, Russian, French, Italian, Polish, Turkish, etc. The UI of EHDView is shown in Figure 3-2.

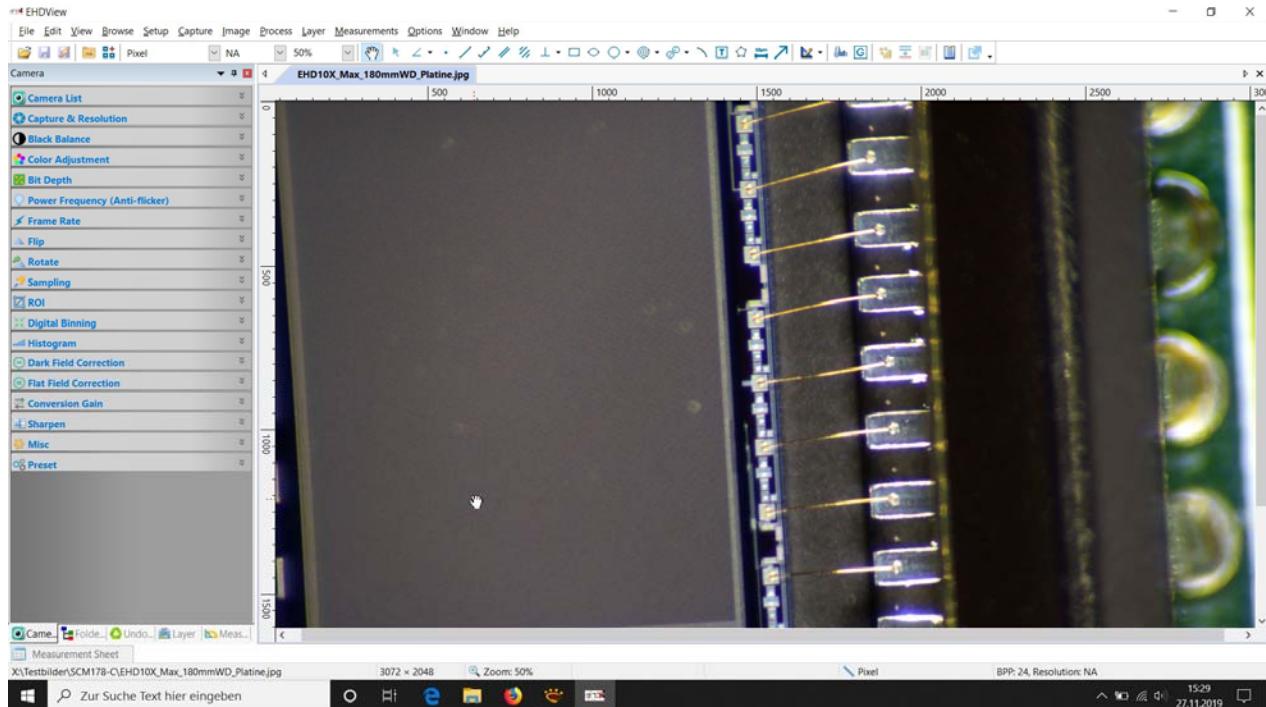

Figure 3-2 EHDView UI

The main features of EHDView are shown in Table 3-1.

Exposure and gain	Automatic exposure, manual exposure, gain up to 5x;
White balance	Automatic white balance; can be adjusted by manually setting the color temperature and color;
Color adjustment	Color, saturation, brightness, contrast, gamma value adjustment feature;
Frame rate control	According to the performance of different computers and USB, the compatibility of the camera can be realized by adjusting the frame rate;
Light source frequency control	Natural light / DC, AC50HZ, AC60HZ selection button eliminates video flicker;
Acoustic image	The direction of the adjustable sample can be adjusted by "horizontal" or "vertical" and is consistent with the direction of the visual system;
Sampling and neighborhood averaging and other features	Neighborhood average can improve the signal-to-noise ratio of video stream and sampling extraction mode can ensure the sharpness of video stream. Support video stream histogram expansion, image negative and positive film switching, gray calibration, clarity factor calculation to facilitate video focusing;
Parameter saving	Load, save, overwrite, load, export custom camera panel control;
Video feature	video broadcasting, timing capture, video recording, video watermarking, watermark movement alignment, watermark rotation alignment, video grid overlay, video measurement, video scaling, grayscale scaling calibration, video high dynamic (HDR), video depth of field expansion, video image stitching, video scale, the date and the like are superimposed;
Image processing and enhancement	Image contrast control and adjustment, image de-noising, various image filter algorithms, image mathematical morphology algorithm, image rotation, image scaling and image printing;
2D measurement	Convenient and practical video and image size calibration, a variety of video and image two-dimensional

EHD imaging GmbH SCM-Series User Manual for Machine Vision Cameras

	geometric measurements such as length, area, perimeter and angle, etc., the measurement results can be controlled according to image characteristics or preferences;
Image mosaicking	The image stitching can automatically splice the sequence image into a mosaic image. a video window, an image window and a browsing window splicing operation are supported;
EDF (field of field continuation)	Depth of field expansion can get ultra-clear images beyond the conventional depth of field by focusing on different layers of images. EHDView supports EDF depth expansion in three windows: video window, image window and browsing window. For different images, EHDView also provides three different depth of field extension algorithms, such as maximum contrast, weighted average and FFDSSD. In addition, the translation, rotation and automatic depth of field expansion between different focus images are considered to ensure the accuracy and rapidity of EDF;
Professional segmentation and counting	The segmentation and counting of EHDView provides six image segmentation methods for users to call according to different image characteristics. The six segmentation methods are watershed, dark OTSU, bright OTSU, RGB histogram, HSV histogram, color segmentation and so on. Users can select any of the six segmentation methods for segmentation, but after selecting any segmentation method, other segmentation methods will be disabled. After the segmentation is completed, there may be the adhesion of the counting object, which can be manually segmented by manual segmentation and the counting results can be counted and analyzed by selecting the counting result menu after confirming the expected results;
Image superposition denoising	EHDView image superposition denoising feature introduces advanced image matching technology, users only need to record a small video of their own image to be superimposed, then they can superimpose and output high fidelity images under the condition of displacement, rotation and magnification of frame burst images, which is simple and easy to use;
Color synthesis	Color synthesis can use black and white fluorescent light source images to create and configure color composite images. Fluorescent probes and colors can be selected directly from predefined data. The dye database of special probe can also be built by the user himself;

Table 3-1 Main features of EHDView

4 Camera Installation and Operation

4.1 Installation steps

1. Fix the camera onto the installation position and attach appropriate C-mount lens to the camera.
2. Verify that the camera is properly connected to the industrial computer or PC using the Micro USB3.0 cable that comes with the camera. Tighten the cable by fastening screw at the camera side.

4.2 Driver check

The Operation Systems under Windows 7(Including WIN7) require a normal installation of the drive before the camera is used and if the drive installation fails, the camera will not be found by the client software.

After the installation is complete, in the [Device Manager](#), you can see the new device type, such as I3CMS05000KMB and then right-click the mouse button to see if the device drive is properly installed or not, as shown in Figure 4-1.

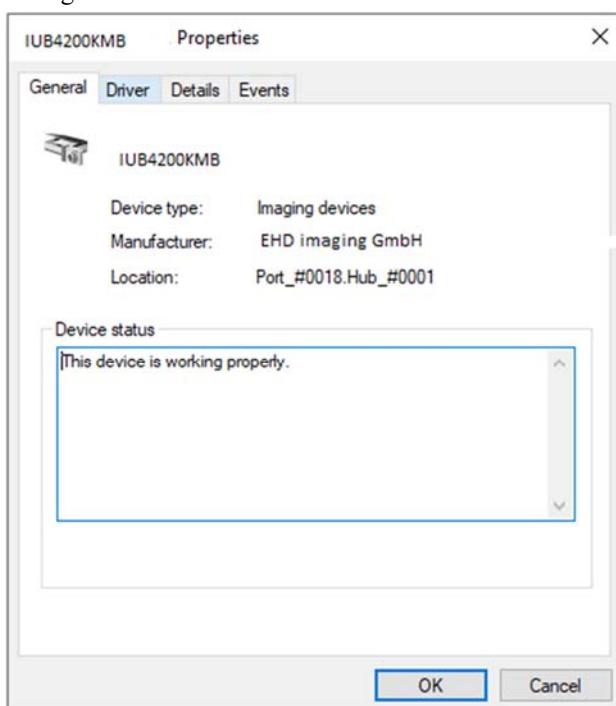

Figure 4-1 EHD driver attribute

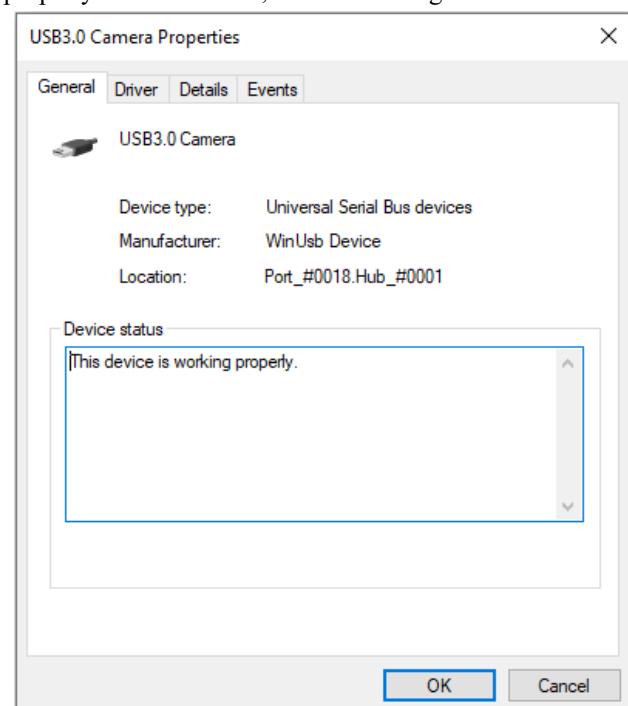

Figure 4-2 Win USB driver attribute

The operating systems above Windows 8(Including Windows 8) will install the driver automatically after the camera is connected and the driver name is USB3.0 Camera, as shown in Figure 4-2.

4.3 Setup and operation

As shown in Figure 4-3, open democpp.exe and click "Device" in the top control menu, where all connected cameras are displayed and click on the corresponding camera name to run the camera.

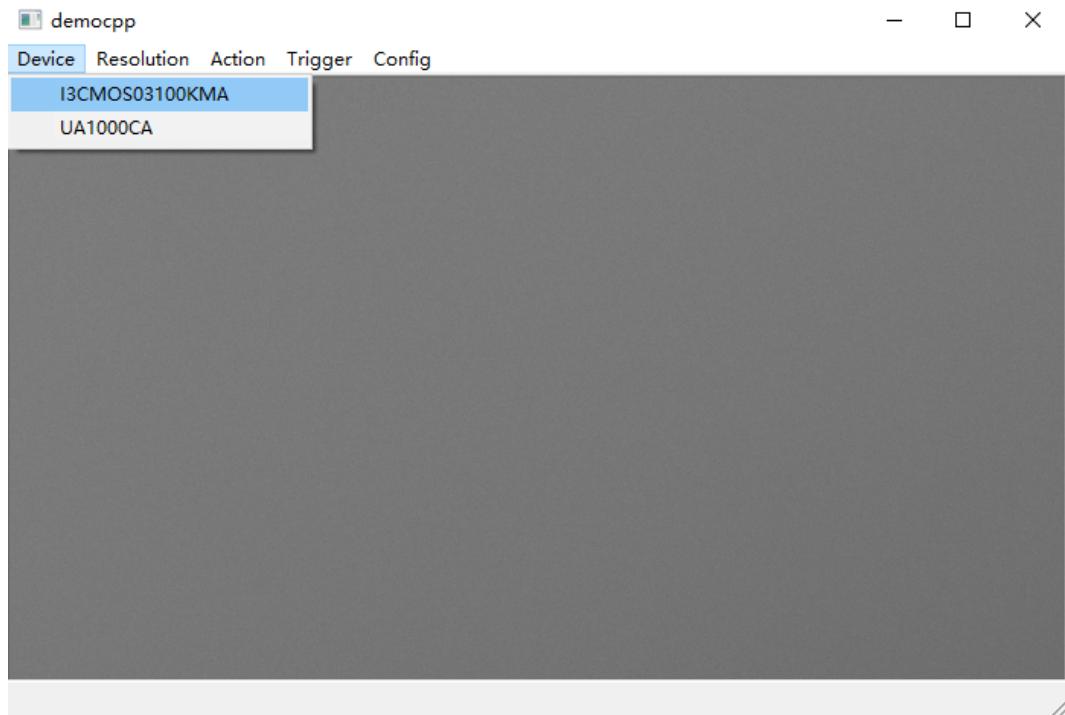

Figure 4-3 democpp UI

5 Main Features of democpp

5.1 Description of main features

As shown in Figure 5-1, in the `democpp`, click the "Resolution-> Preview" in the top control menu to select the resolution of the camera; "Resolution->Snap" captures image at current resolution; "Resolution->Snap Multiple" captures multiple images at the specified resolution.

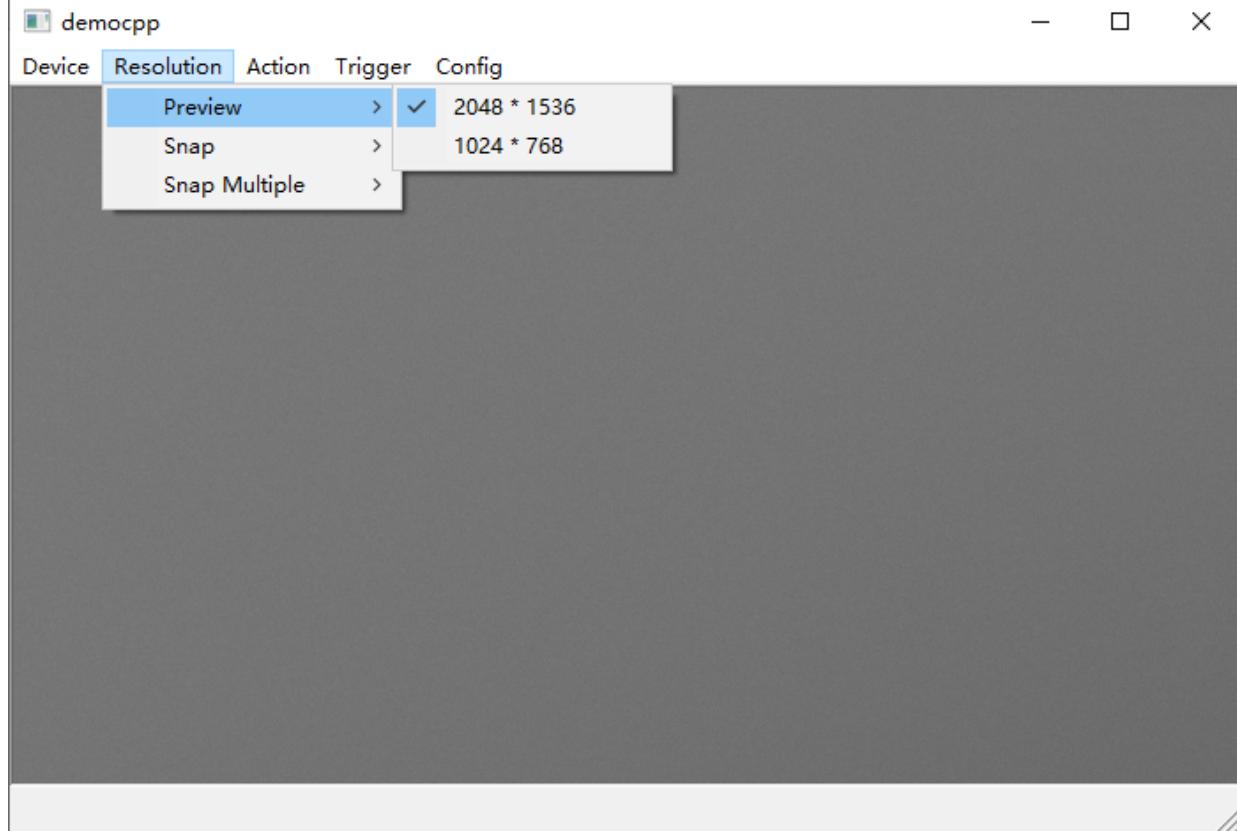

Figure 5-1 Acquisition and resolution

The following is the API code for the image capture operation:

```
//still image snap
Toupcam_Snap(HToupcam h, unsigned nResolutionIndex);
//multiple still image snap
Toupcam_SnapN(HToupcam h, unsigned nResolutionIndex, unsigned nNumber);
//The following is the API code that sets the resolution.:
Toupcam_put_Size(HToupcam h, int nWidth, int nHeight);
Toupcam_put_eSize(HToupcam h, unsigned nResolutionIndex);
```

5.2 Image format and frame rate

The camera supports a variety of image file formats and the setup of image region of interest. The smaller image ROI will have higher frame rate.

5.2.1 Camera data format

The list of pixel formats supported by the IUX series cameras are shown in Table 5-1 ("Y" for supported; “-” for not supported)

EHD imaging GmbH SCM-Series User Manual for Machine Vision Cameras

Format	RAW8	RAW10	RAW12	RAW14	RGB8	RGB24	RGB32	RGB48
SCM432-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM432-C-TR	Y	---	Y	---	Y	Y	Y	Y
SCM178-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM178-C-TR	Y	---	Y	---	Y	Y	Y	Y
SCM428-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM428-C-TR	Y	---	Y	---	Y	Y	Y	Y
SCM183-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM183-C-TR	Y	---	Y	---	Y	Y	Y	Y
SCM2020-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM2020-UV-TR	Y	---	Y	---	Y	Y	Y	Y
SCM0806-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM571-C-TR	Y	---	Y	Y	Y	Y	Y	Y
SCM342-M-TR	Y	---	Y	---	Y	Y	Y	Y
SCM342-C-TR	Y	---	Y	---	Y	Y	Y	Y
SCM455-M-TR	Y	---	Y	Y	Y	Y	Y	Y
SCM455-C-TR	Y	---	Y	Y	Y	Y	Y	Y

Table 5-1 IUX series camera Image data format

5.2.2 Frame rate

The maximum frame rate that the camera can achieve is determined by the following three factors:

- Frame readout time, the smaller the image height, the shorter the time required to read out, the higher the frame rate.
- Exposure time, the shorter the exposure time, the higher the frame rate.
- Bandwidth, the larger the bandwidth, the higher the frame rate that supports transmission.

As shown in Figure 5-2, in [democpp](#), click "Config->Speed" in the top control menu and drag the slider bar in "Speed" dialog to set the frame rate.

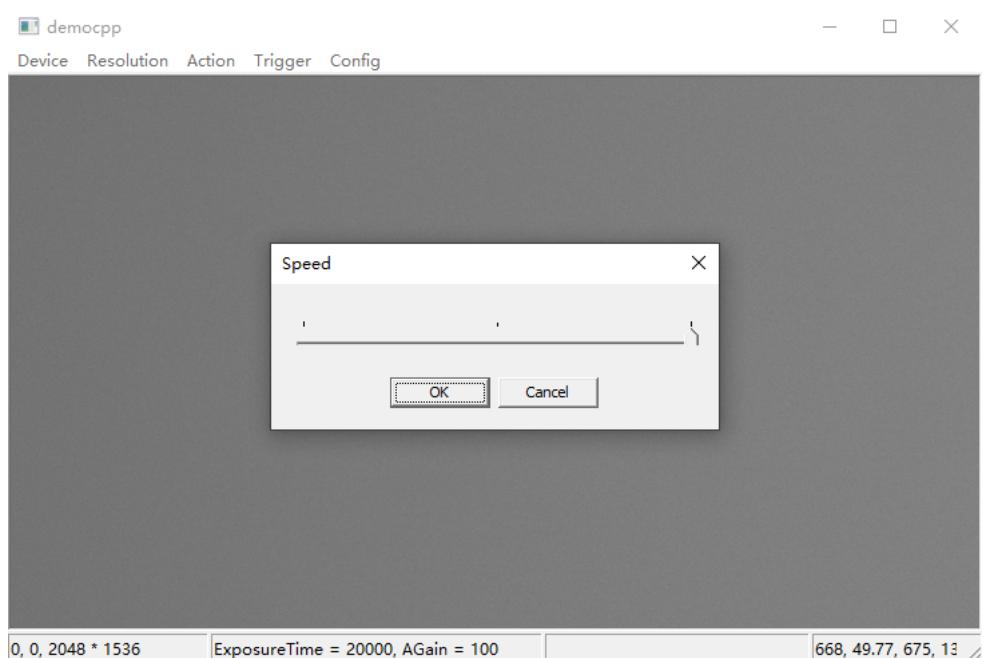

Figure 5-2 Frame rate setup

The following is the API code for the setup of the frame rate:

```
Toupcam_put_Speed(HToupcam h, unsigned short nSpeed);
```

5.2.3 Area of interest setup

When the user is only interested in some details of the image, the camera can output the image ROI according to the requirement. Setup the image ROI can reduce the transmission data bandwidth and improve the camera frame rate to a certain extent.

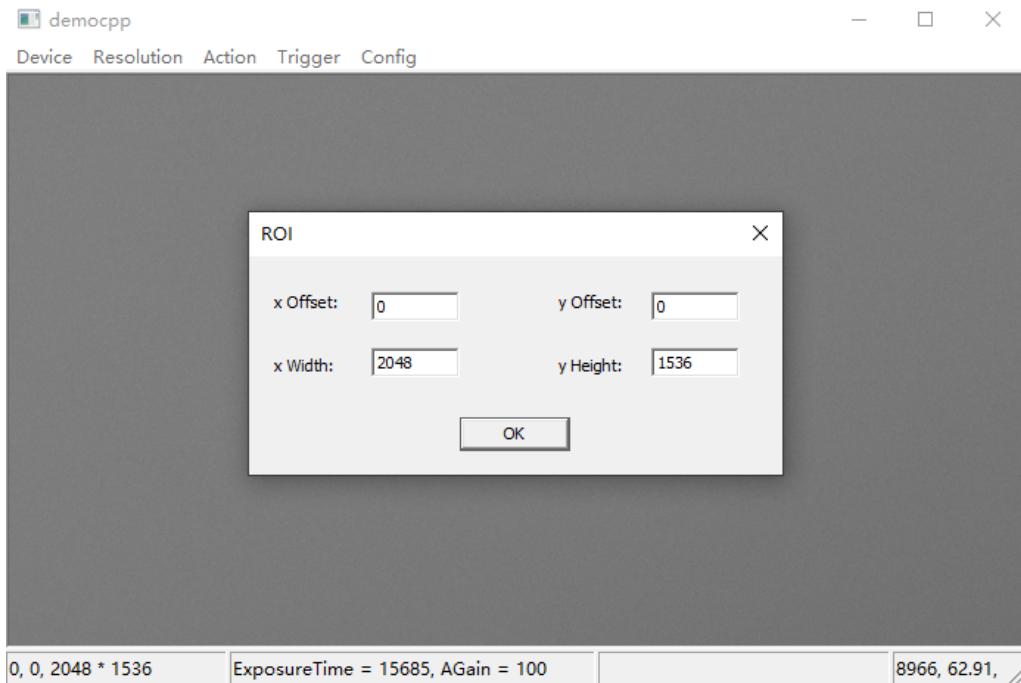

Figure 5-3 Area of interest setup

As shown in Figure 5-3, in [democpp](#), click "Action->ROI" in the upper control menu and in "ROI" dialog, fill x Offset, y Offset, x Width, y Height to adjust the ROI, where the values in x Offset and y Offset represent the starting point of the ROI up left corner.

The following is the API code for the setup of the image ROI:

```
Toupcam_put_Roi(HToupcam h, unsigned xOffset, unsigned yOffset, unsigned xWidth, unsigned yHeight);
```

5.3 Global Shutter and Rolling Shutter

5.3.1 Global Shutter

For cameras that support global shutter, exposure starts in each line simultaneously. After the exposure, data is read out line by line, as shown in Figure 5-4.

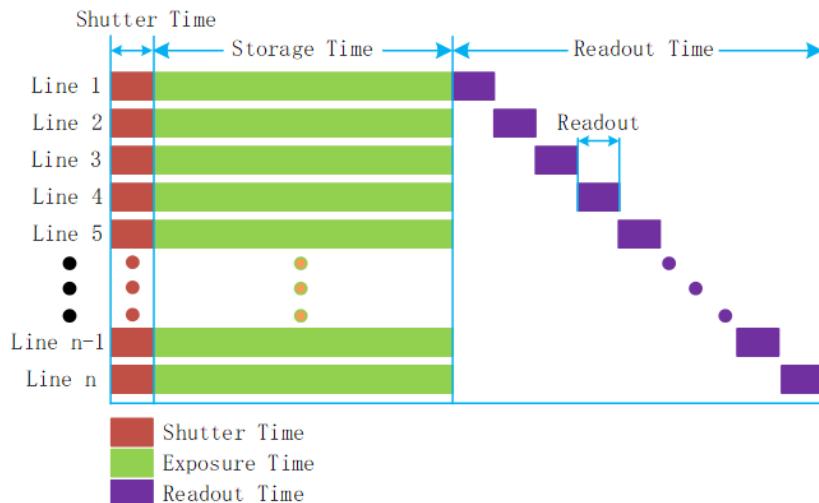

Figure 5-4 global shutter exposure principle

5.3.2 Rolling Shutter

For cameras that support rolling shutter, after the first line exposure, the next line begins to exposure, repeat in this way. Sensor receive exposure and data read the time length to be consistent, but the time of begin to receive exposure is inconsistent, as shown in Figure 5-5.

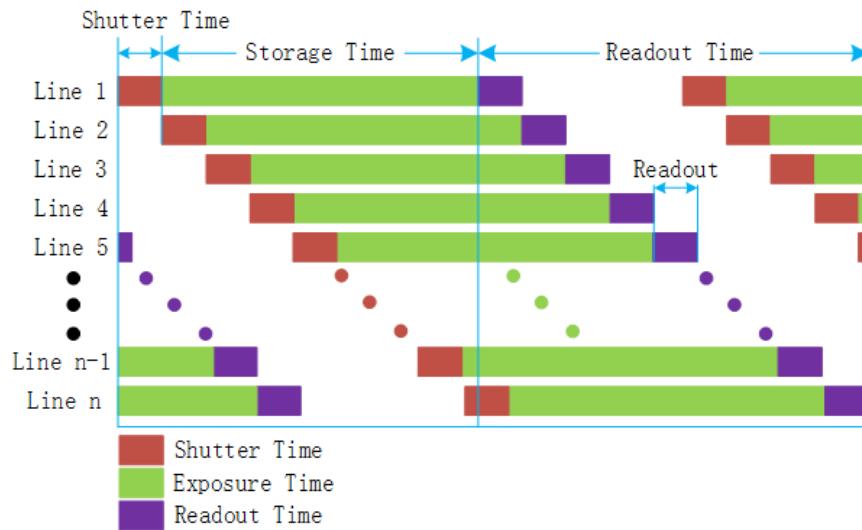

Figure 5-5 Rolling shutter exposure principle

5.4 Image acquisition and transmission

There are two image acquisition modes, free run mode and trigger mode. Among them, the free run mode is continuous acquisition mode and the trigger mode captures one or more frames of images according to the trigger signal. The trigger sources include software trigger and external trigger.

As shown in Figure 5-6, in democpp, the free run mode and trigger mode are switched by clicking on "Trigger" menu and choosing "Enter Trigger Mode" command. The "✓" checkmark indicates that the current mode is in trigger mode, otherwise free run mode.

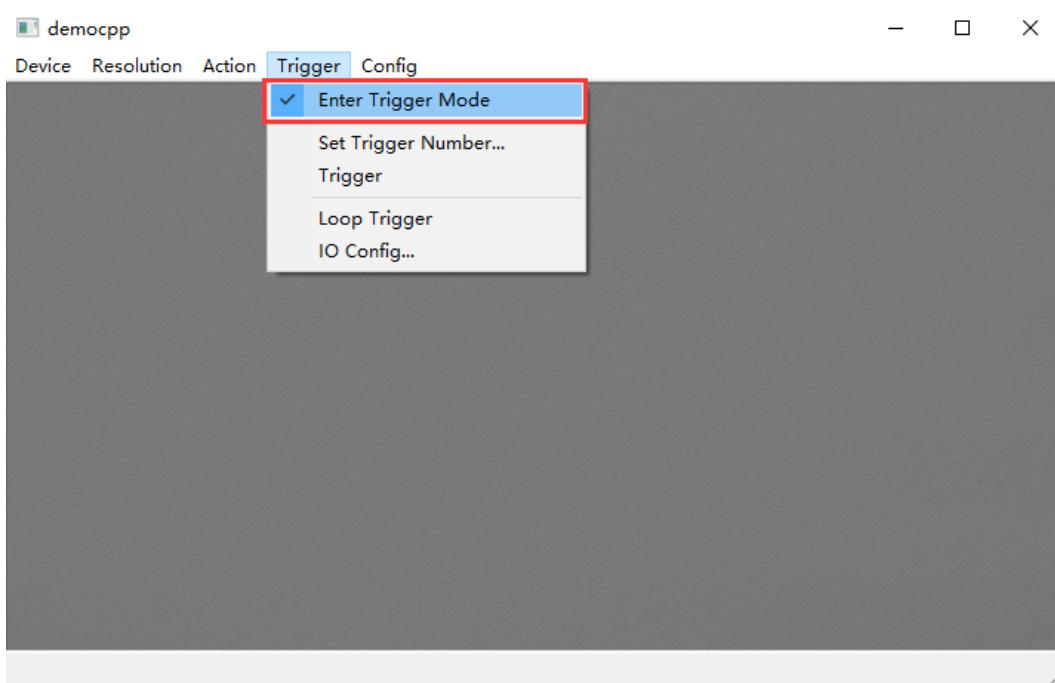

Figure 5-6 Image acquisition mode switching

The following are the API codes for the switching of the free run mode to trigger mode:

```
// 0 = video mode, 1 = software or simulated trigger mode, 2 = external trigger mode  
Toupcam_put_Option(m_hCam, TOUPCAM_OPTION_TRIGGER, val);
```

5.4.1 Free run mode

Under free run mode, the user can control the camera to continuously output images. Starting the [democpp](#) software, connecting the camera and clicking run, the camera will run under free run mode by default. The camera continuously outputs the image according to the current setting.

5.4.2 Trigger mode

After the camera enters the trigger mode, it enters the waiting trigger state automatically. After receiving a trigger signal, the camera begins to expose and after the exposure is finished, the image data will be flashed out. Under trigger mode, image acquisition methods have single frame trigger, multi frame trigger, counter trigger and PWM trigger mode.

5.4.3 Trigger signal source selection

Under the trigger mode, trigger signal source is either from software trigger, or from external trigger. The external trigger signal is from either the pin isolated by opto-coupler or the non-isolated pin.

The following is the API code for the setup of the trigger source:

```
// Trigger Source: 0->line0, 1->line2, 2->line3, 3->Counter, 4->PWM, 5->Software  
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_TRIGGERSOURCE, val, NULL);
```

- Software trigger

The camera supports software trigger mode. When a software trigger is executed, the client software will send the command through USB3.0 to activate the camera to acquire and transmit images.

As shown in Figure 5-7, in [democpp](#), first click "Enter Trigger Mode" to enter trigger mode. Click "Set trigger Number" to define the number of triggers and finally click "Trigger" and the software will receive the number of triggers. If you click "Loop Trigger", you will enter a continuous trigger mode and clicking it again will exit the current trigger mode.

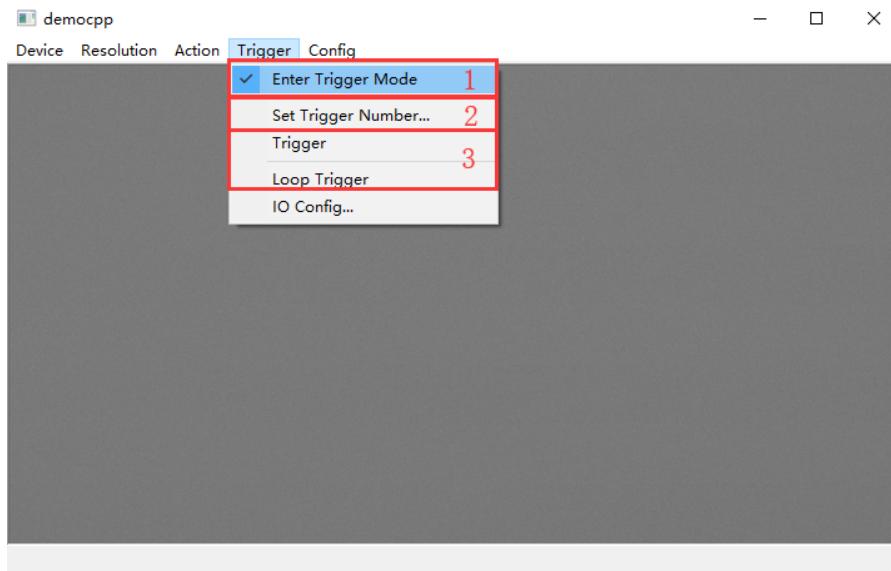

Figure 5-7 Software trigger setup

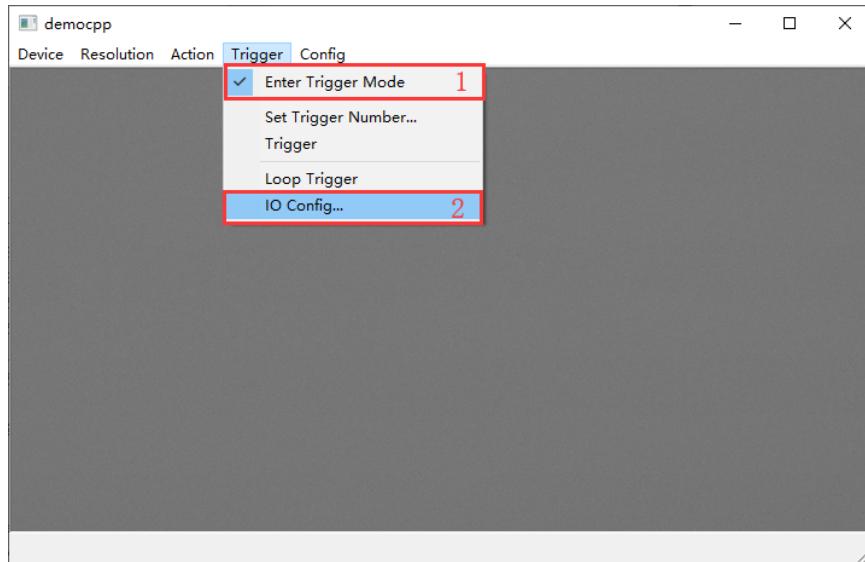

Figure 5-8 Set the external trigger source

Figure 5-8 shows the configuration of external trigger. First select "Enter Trigger Mode" to enter trigger mode. Then click "IO Config" and the I/O Control dialog will pop up as shown in Figure 5-9. The trigger source is selected in the "Trigger Source" and then click "OK". At this time a high pulse will trigger the camera on the corresponding line.

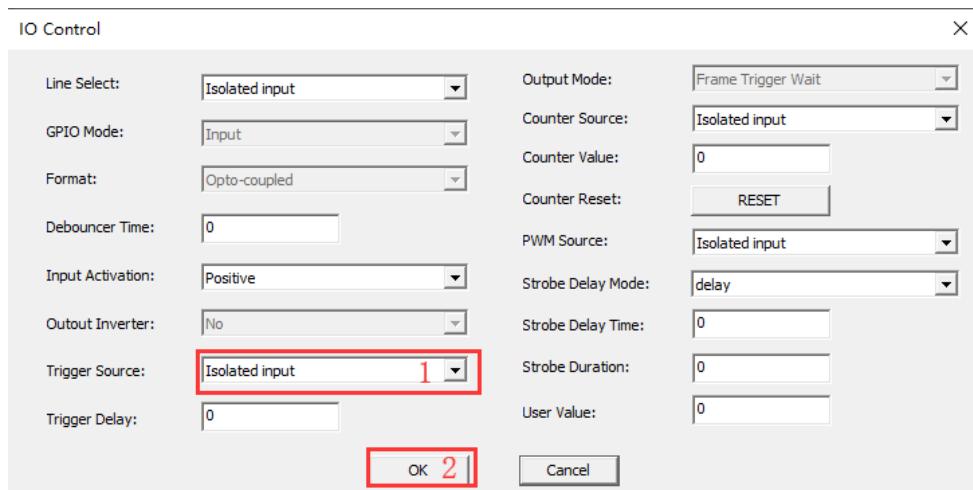

Figure 5-9 I/O control dialog

5.4.4 Frame burst mode

The camera provides a frame burst mode, that is, receiving one trigger signal and producing multiple burst images. The trigger frame value can range from 1 to 1023. “Burst Count = 1” means a one-frame image output, as shown in Figure 5-10, “Burst Count = 3” means a three-frame image output.

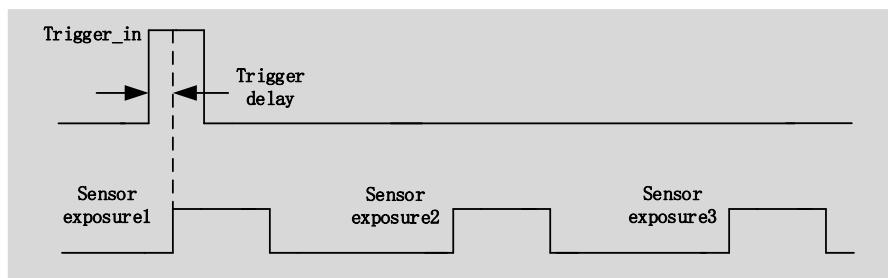

Figure 5-10 Frame burst trigger timing

Here is the API code for the setup of the trigger frame value

```
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_BURSTCOUNTER, val, NULL);
```

5.4.5 Counter trigger mode

Under this mode, trigger signal number is divided by user-defined counter value. For example, when you set the counter to 3, the camera needs to receive three trigger signals before it can begin exposure, as shown in Figure 5-11.

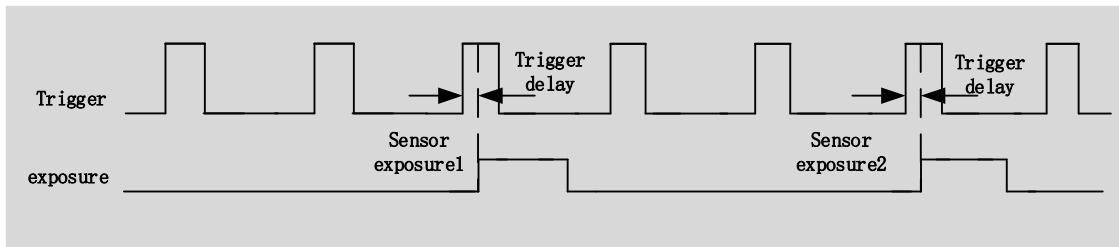

Figure 5-11 Counter trigger mode

The specific operation in [democpp](#) are shown in Figure 5-12. First, under "Trigger Source", select the trigger source as Counter, then click "Counter Source" to select the external trigger source that needs to be divided and configure the frequency division coefficient in "Counter Value" in the range of 1-1023. "Counter Reset" can clear the current frequency division counter to zero.

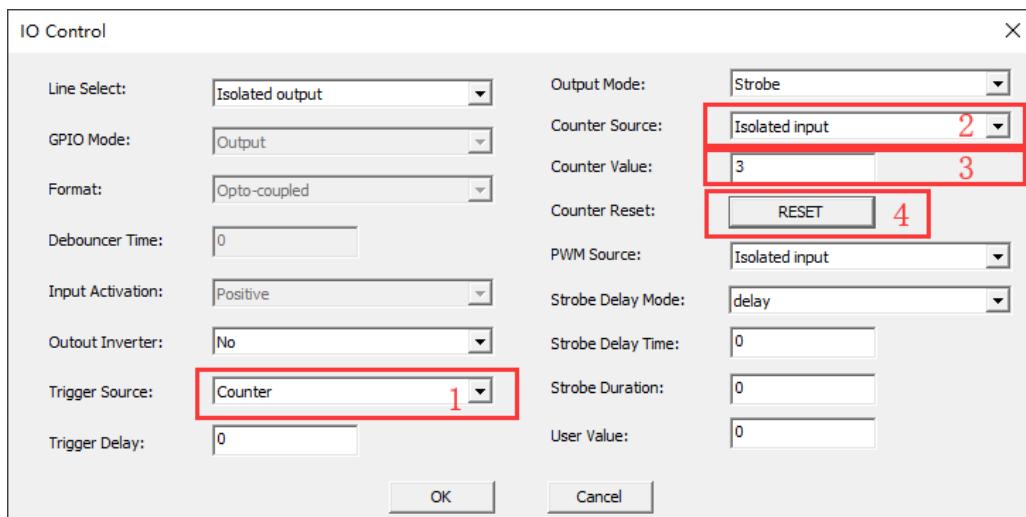

Figure 5-12 Counter trigger mode setup

The following is the API code for the setup of the counter trigger mode:

```
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_TRIGGERSOURCE, 3, NULL);
//Counter Source: 0->line0 , 1->line2 , 2->line3
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_COUNTERSOURCE, val, NULL);
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_COUNTERVALUE, val, NULL);
```

5.4.6 PWM trigger mode

The camera provides Pulse Width Modulation (PWM) trigger mode, which controls exposure time by pulse width. The main difference between this mode and the standard single frame trigger mode is the exposure method. The exposure time per frame is determined by the trigger pulse width, as shown in Figure 5-13.

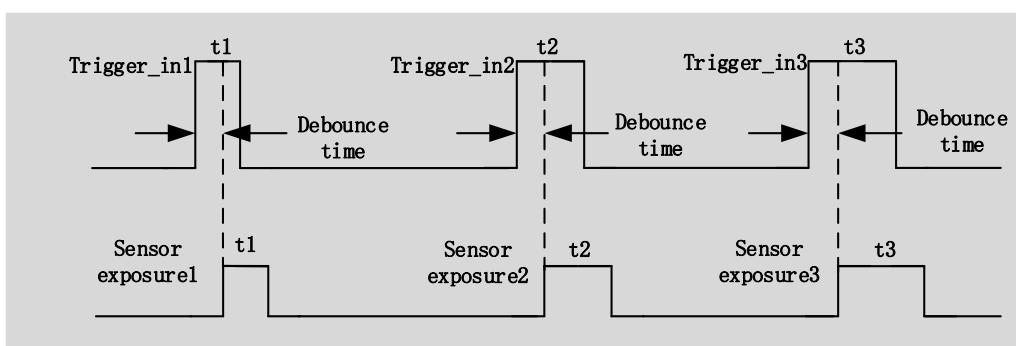

Figure 5-13 PWM mode timing

The following cameras with rolling shutter sensors do not support PWM trigger mode:

SCM178-M-TR, SCM178-C-TR; SCM183-M-TR, SCM183-C-TR,

SCM2020-M-TR, SCM2020-UV-TR;

SCM271-C-TR, SCM455-M-TR, SCM455-C-TR

As shown in Figure 5-14 in [democpp](#), select the trigger source as PWM, under "Trigger Source" and click "PWM Source" to select the external trigger source for input.

The following is the API code for the setup of the counter trigger mode:

```
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_TRIGGERSOURCE, 4, NULL);
```

```
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_PWMSOURCE, val, NULL);
```

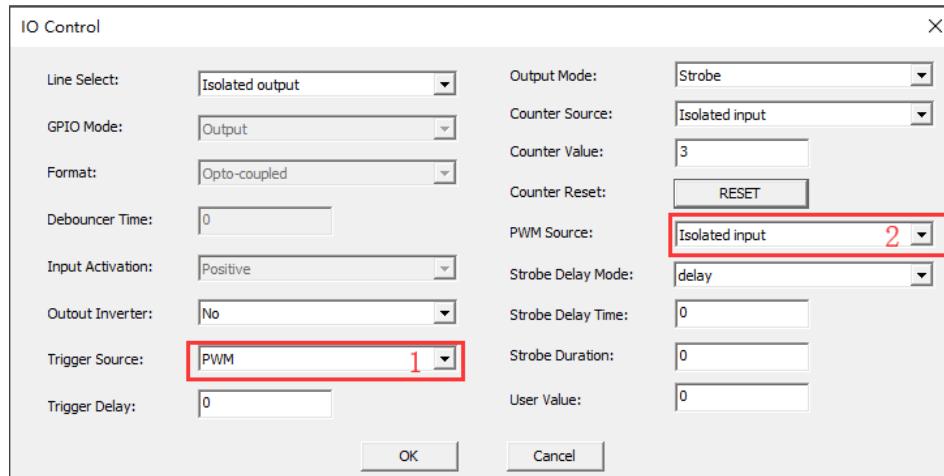

Figure 5-14 PWM mode parameter control

5.5 Input signal

5.5.1 Signal debouncer

Because the external trigger input signal of the camera may have burr, if it goes directly into the internal logic of the camera, it will cause false trigger. The input trigger signal should be debounced. In addition, the effective pulse width of the trigger signal inputted by the user should be greater than the debouncer time, otherwise the trigger signal will be ignored. The timing is shown in Figure 5-15. If the effective pulse width of Trigger_in1 is less than the debouncer time, the trigger signal will be ignored.

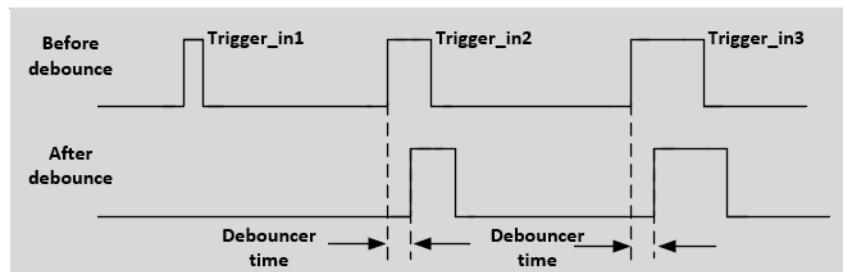

Figure 5-15 Signal debounce timing

As shown in Figure 5-16, in [democpp](#), enter the "IO Config" dialog, click "Line Select" to select the input line and then set the debouncer time at "Debounce Time" in the range of $0 \leq 20000$ in microseconds.

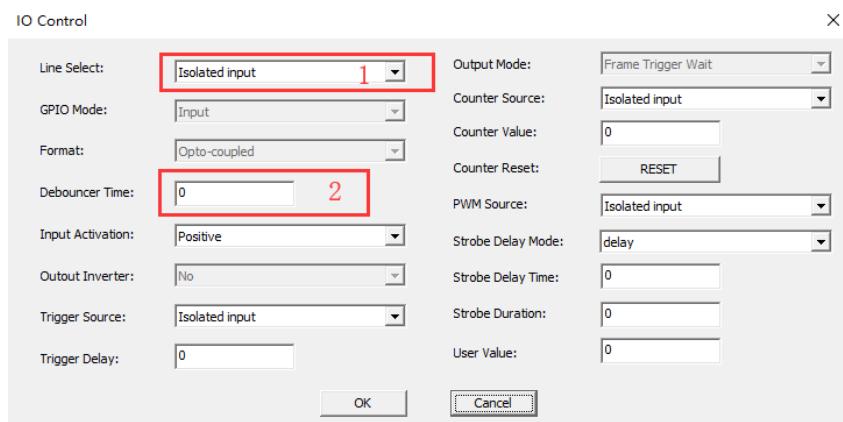

Figure 5-16 Signal Debounce setup

The following is the API code for the setup of the debouncer time:

```
Toupcam_IoControl(m_hCam, index, TOUPCAM_IOCONTROLTYPE_SET_DEBOUNCERTIME, val, NULL);
```

5.6 Output signal

The camera provides 4 output signal modes: Frame Trigger Wait, Exposure Active, Strobe and User Output.

As shown in Figure 5-17, in the "IO Config" dialog, first select the "Isolated output" in the "Line Select" combobox, then select the output signal mode in the "Output Mode" combobox, click "Output Inverter" to reverse the output signal.

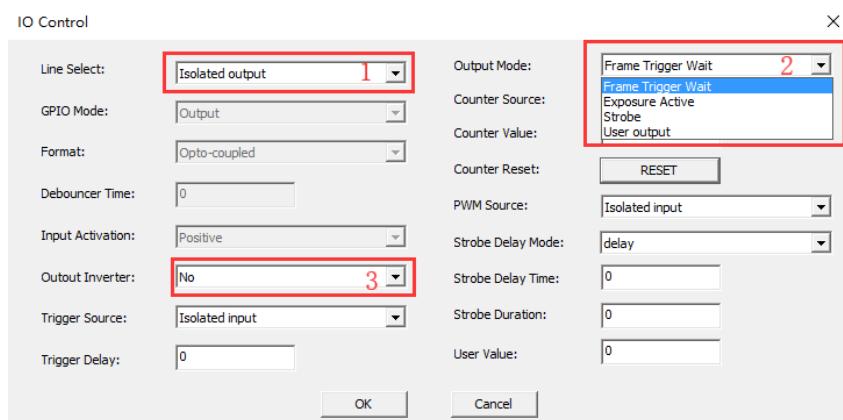

Figure 5-17 Output signal mode setup

The following is the API code for the setup of the output signal mode:

```
Toupcam_IoControl(m_hCam, index, TOUPCAM_IOCONTROLTYPE_SET_OUTPUTMODE, val, NULL);
```

```
// Output Mode: 0-> Frame Trigger Wait , 1-> Exposure Active , 2-> Strobe , 3-> User output
```

```
// index: 0-> line0 , 1-> line1, 2-> line2 , 3-> line3
```

5.6.1 Frame Trigger Wait

The “Frame Trigger Wait” signal is pulled low at the start of the exposure and is pulled high when the last frame of data is read out. The trigger signal inputted by the user should be in the valid period of the signal. If the user inputs a trigger signal when the signal is low, the trigger signal input at this time will be ignored. The following example is the case when Burst Count = 2, as shown in Figure 5-18.

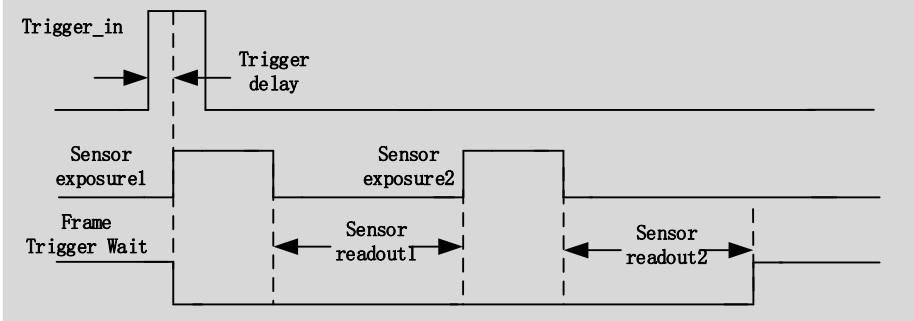

Figure 5-18 Frame Trigger Wait signal timing

5.6.2 Exposure Active

When “Exposure Active” signal is high, it indicates that the sensor is in the exposure process. This signal can be used as a flash trigger and is also useful when you are operating a system where either the camera or the object being imaged is movable. For example, assume that the camera is mounted on an arm mechanism and that the mechanism can move the camera to view different portions of a product assembly.

5.6.3 Strobe

Strobe can be used to control flash and other external devices. User can set the effective level duration, delay time and pre-delay time.

As shown in Figure 5-19, in the "IO Config" dialog of [democpp](#), select the Output Mode as “Strobe”, click "Strobe Delay Mode" to select the “delay” or “pre-delay” and set the time in "Strobe Delay Time". "Strobe Duration" can set the effective level duration of Strobe.

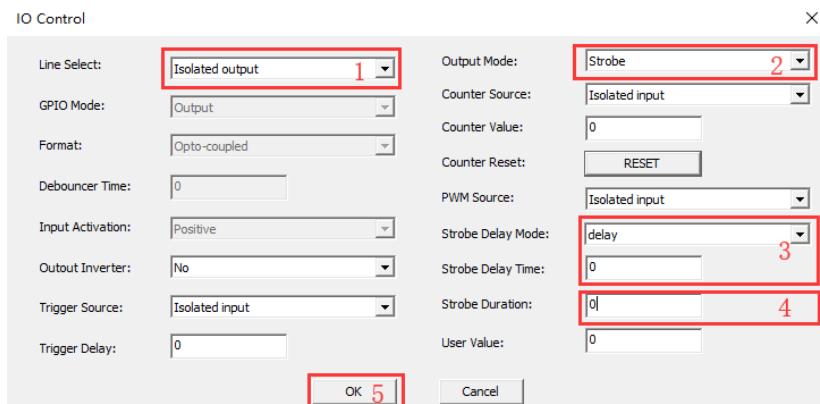

Figure 5-19 Strobe settings

The following is the API code for the setup of the output Strobe signal:

```

Toupcam_IoControl(m_hCam, index, TOUPCAM_IOCONTROLTYPE_SET_OUTPUTMODE, 2, NULL);
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_STROBEDURATION, val, NULL);
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_STROBEDELAYMODE, val, NULL);
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_STROBEDELAYTIME, val, NULL);

```

- Strobe effective electrical level duration

As shown in Figure 5-20, the Strobe signal is activated at a high level. When the shutter starts to expose, the Strobe signal’s high duration is determined by the "Strobe Duration" value: when the "Strobe Duration" value is 0, the high level duration of the Strobe signal is equal to the exposure time; if the "Strobe Duration" value is not 0, The Strobe signal’s high continuity time is equal to the "Strobe Duration" value.

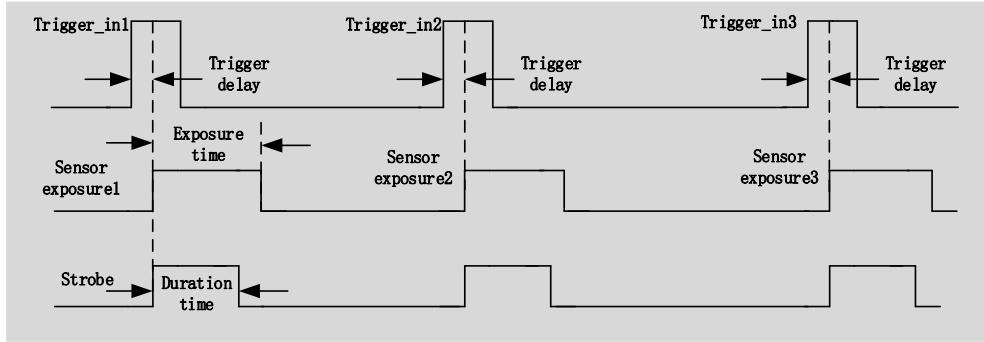

Figure 5-20 Strobe effective level duration

- Strobe output delay

The camera provides the feature of output delay to strobe signal to meet the special usage of users. When the exposure begins, the Strobe signal output does not immediately take effect, delayed according to the value set by "Strobe Delay Time". As shown in Figure 5-21.

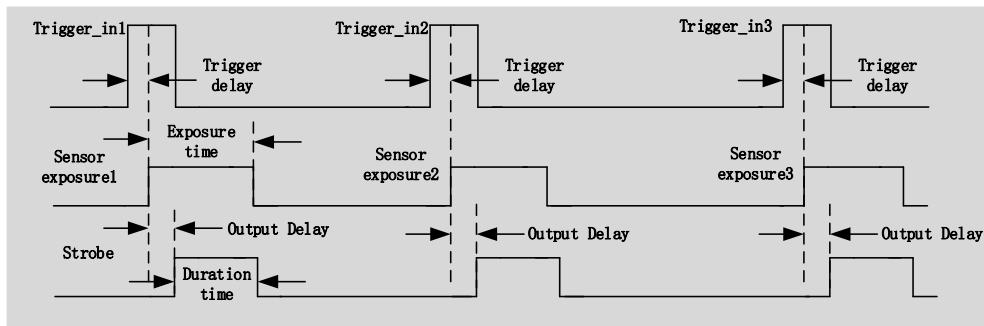

Figure 5-21 Strobe output delay

- Strobe Pre-output

The camera also provides a pre-output feature of the strobe signal, that is, the strobe signal takes effect earlier than the exposure begins.

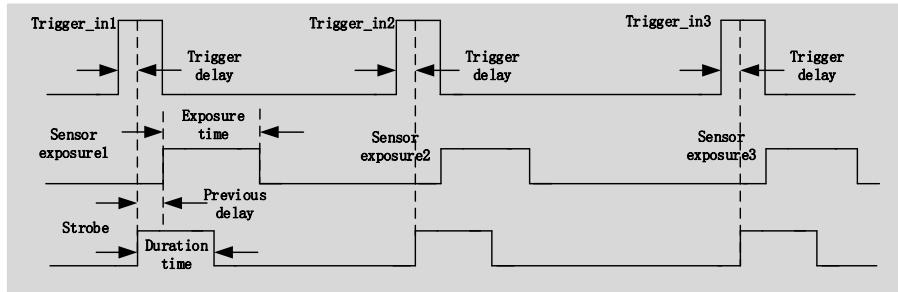

Figure 5-22 Strobe Pre-output

This feature can be applied to flash lamps with slow response. The pre-output time is set by "Strobe Delay Time". The timing is shown in Figure 5-22.

5.6.4 User Output

When choosing the "User Output" output mode, the user can enter a value after the "User Value" control to set the corresponding line output 0 or 1. The value here is only the low three bits of binary, for example when line1, line3 is set to the "User Output" output mode and the "User Value" is set to 4 (undefinedb100), then line3 outputs 1, line1 output 0. as shown in Figure 5-23

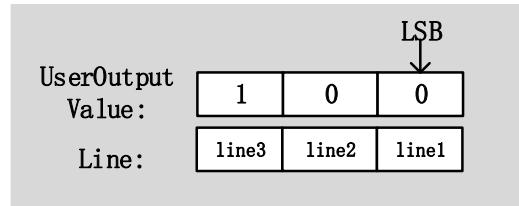

Figure 5-23 User-defined output schematic diagram

The following is the API code to set User Output:

```
Toupcam_IoControl(m_hCam, index, TOUPCAM_IOCONTROLTYPE_SET_OUTPUTMODE, 3, NULL);
Toupcam_IoControl(m_hCam, 0, TOUPCAM_IOCONTROLTYPE_SET_USERVALUE, val, NULL);
```

5.7 Camera control parameter configuration

5.7.1 Exposure time

The exposure time range is specified in the camera technical specifications section (Sec.1). Exposure time control supports manual control and automatic exposure control. When the camera is in trigger mode, the automatic control exposure feature will be disabled.

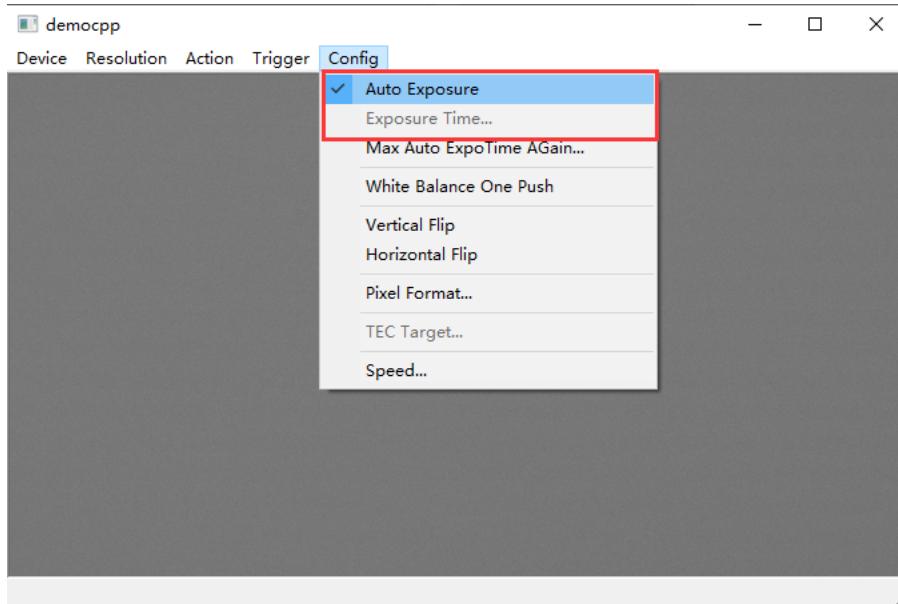

Figure 5-24 Exposure time setup

As shown in Figure 5-24, in [democpp](#), click "Config" in the top control menu. Click "Auto Exposure" and the "✓" checkmark indicates that automatic control exposure mode is on. Click again to exit the current mode. Click "Exposure Time" menu and a dialog called Exposure Time will pop up and drag the slider in the new dialog to manually set the exposure time control.

Here is the API code for the setup the exposure time:

```
Toupcam_put_AutoExpoEnable(HToupcam h, int bAutoExposure);
Toupcam_put_AutoExpoTarget(HToupcam h, unsigned short Target);
Toupcam_put_ExpoTime(HToupcam h, unsigned Time); /* in microseconds */
```

5.7.2 Gain control

The gain value range is specified in the camera technical specifications section in Sec.1. When the gain increases, the image noise increases.

The following is the API code for the setup of the gain control:

```
Toupcam_put_ExpoAGain(HToupcam h, unsigned short AGain); /* percent */
```

5.7.3 White balance

White balance means that the camera performs color adjustment under different light source. The user can make the white area always white at different color temperatures by adjusting the “R”, “B” component’s gain on the image. Ideally, the ratio of R, G and B components in the white region is 1:1:1.

The white balance setting is shown in Figure 5-25. Click "Config" on the control menu at the top of democpp and click "White Balance One Push" to automatically balance white once.

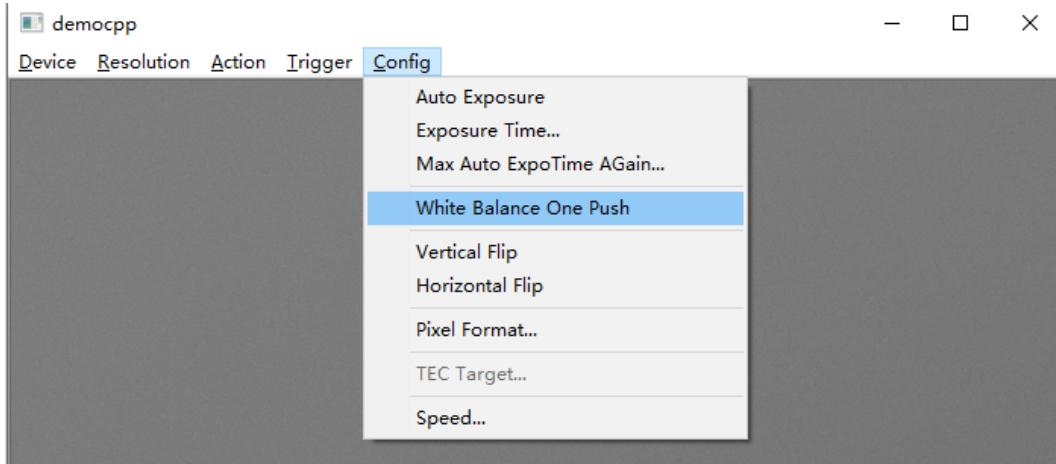

Figure 5-25 White balance setup

The following is the API code for the setup of the white balance one push:

```
//auto white balance "one push". This feature must be called AFTER Toupcam_StartXXXX
Toupcam_AwbOnePush(HToupcam h,PITOUPCAM_TEMPTINT_CALLBACK fnTTProc, void* pTTCtx);
```

5.7.4 Color adjustment

User can adjust hue, saturation, brightness, contrast and gamma value.

The following is the API code for the color adjustment:

```
Toupcam_put_Hue(HToupcam h, int Hue);
Toupcam_put_Saturation(HToupcam h, int Saturation);
Toupcam_put_Brightness(HToupcam h, int Brightness);
Toupcam_put_Contrast(HToupcam h, int Contrast);
Toupcam_put_Gamma(HToupcam h, int Gamma); /* percent */
```

5.7.5 Image flip

As shown in Figure 5-26, in [democpp](#), click "Config" in the control menu. Click "Vertical Flip" to flip the image vertically and "Horizontal Flip" to flip horizontally.

The following is the API code to flip the image:

```
Toupcam_put_VFlip(HToupcam h, int bVFlip); /* vertical flip */
Toupcam_put_HFlip(HToupcam h, int bHFlip); /* horizontal flip */
```

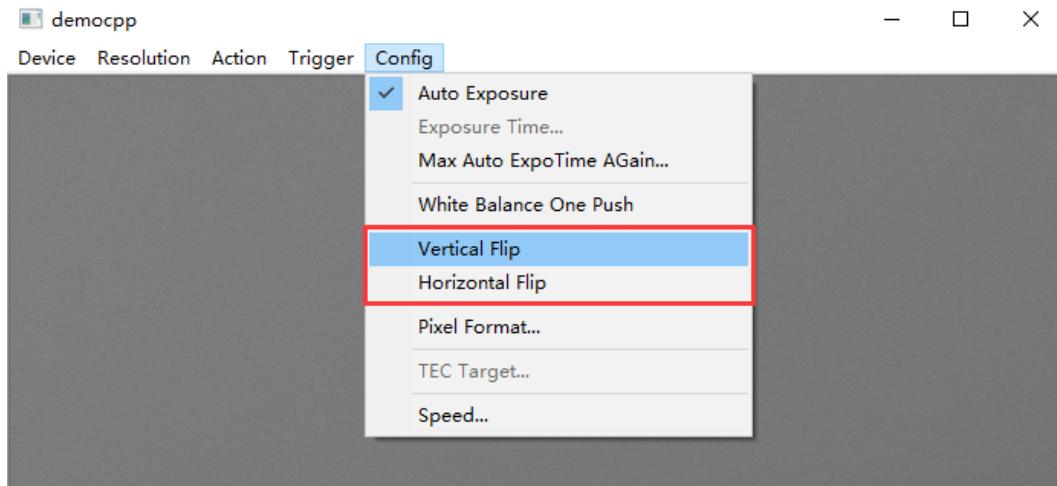

Figure 5-26 Image flip setup

5.7.6 Test pattern

In [democpp](#), as shown in Figure 5-27, clicking "Action" in the control menu, then clicking "Test Pattern". selecting "Normal" to display unaltered sensor captured image, "Test Pattern 1" a gray scale gradient oblique stripe showing the movement, "Test Pattern 2" a gray scale gradient vertical stripe showing the movement and "Test Pattern 3" a grayscale gradient horizontal stripe that shows the movement. The color camera can output a corresponding test pattern.

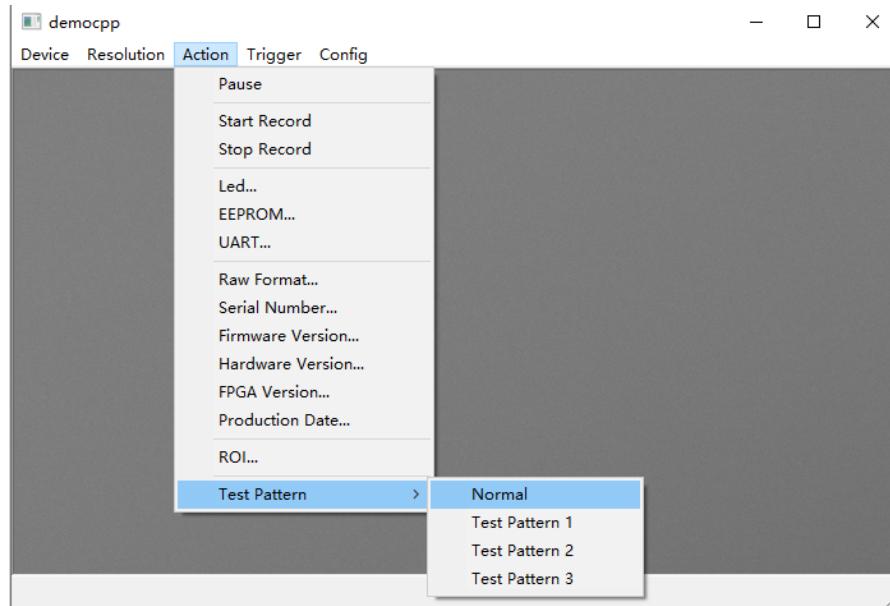

Figure 5-27 Set the test pattern

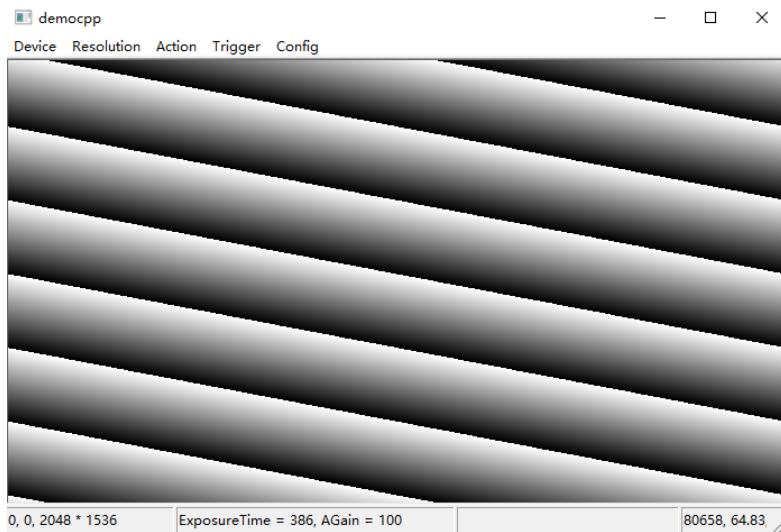

Figure 5-28 Grayscale gradient oblique stripes

Figure 5-29 Grayscale gradient vertical stripes

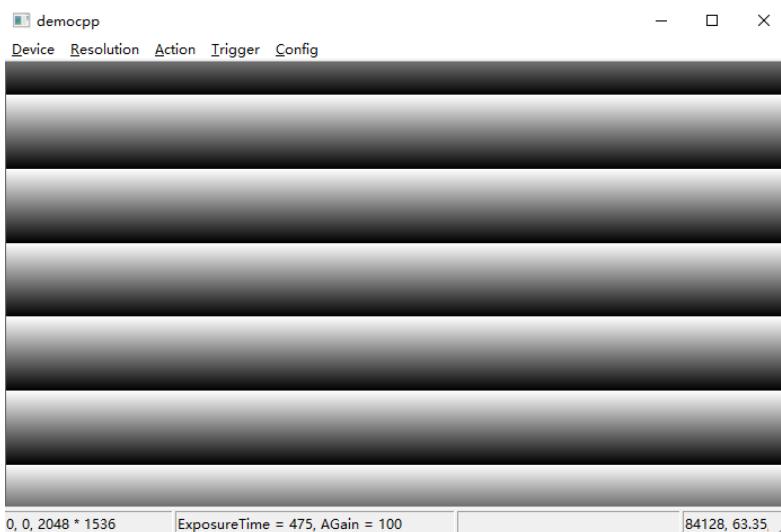

Figure 5-30 Grayscale gradient horizontal stripes

The following is the API code for the setup of the test pattern:

```
// TestPattern: 0-> TestPattern Off , 3-> Moving Diagonal Gray Gradient , 5-> Moving Vertical Gray Gradient , 7-> Moving Horizontal Gray
```

```
Gradient , 9-> Moving Diagonal Chromatic Gradient
```

```
Toupcam_put_Option(m_hCam, TOUPCAM_OPTION_TESTPATTERN, val);
```

5.8 IUX series camera's I/O electrical properties

5.8.1 IUX series camera's opto-isolated input circuit (line0)

In the camera I/O control, opto-isolated input circuit is shown in Fehler! Verweisquelle konnte nicht gefunden werden..

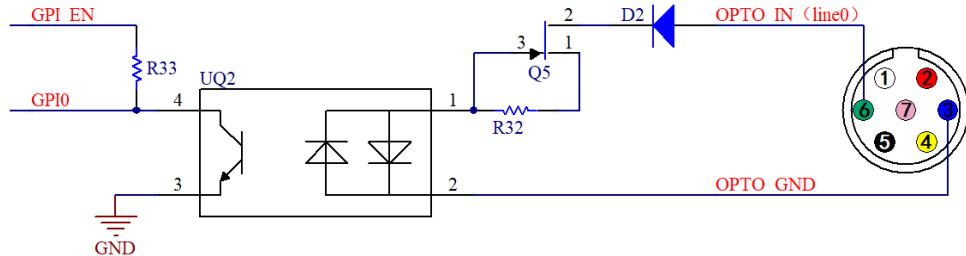

Figure 5-31 Opto-isolated input circuit

Logic 0 input level: 0~2.2VDC (OPTO_IN pin)

Logic 1 input level: 3.3~24VDC (OPTO_IN pin)

Maximum input current: 30mA

The input level is between 2.2V and 3.2V, the circuit action state is uncertain, please avoid the input voltage working in this range.

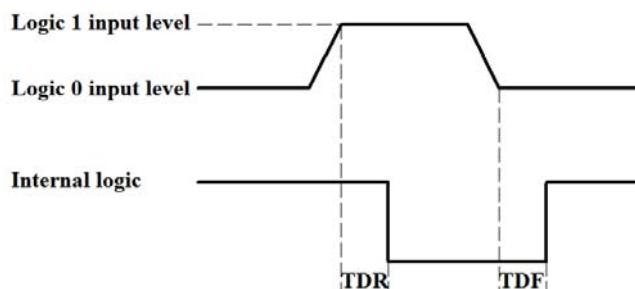

Figure 5-32 Input logic level

Input rise delay (TDR): 6us

Input drop delay (TDF): 6us

5.8.2 IUX series camera's opto-isolated output circuit (line1)

In camera I/O control, opto-isolated output circuit is shown in Fehler! Verweisquelle konnte nicht gefunden werden..

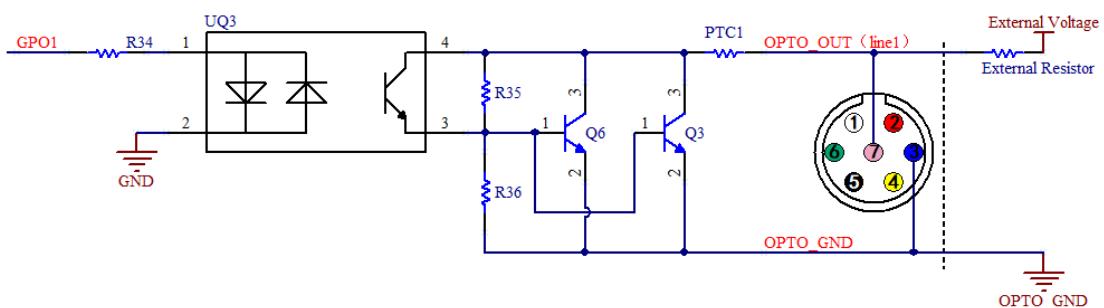

Figure 5-33 Opto-isolated output circuit

Opto-isolated output maximum current: 30mA

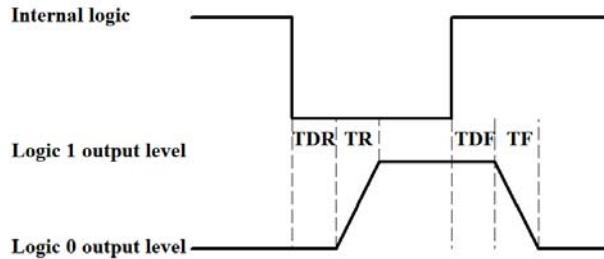

Figure 5-34 Output logic level

The electrical characteristics of the opto-isolated output signal (external voltage 5V, external resistor 1K) are shown in Table 5-2.

Parameter name	Parameter symbol	Parameter values
Output logic low level	VL	742mV
Output logic high	VH	4.134V
output rise time	TR	4us
Output downtime	TF	1.8us
Output rising delay	TDR	12us
Output drop delay	TDF	2us

Table 5-2 Opto-isolated output signal's electrical characteristics

The corresponding current and output logic low level parameters are shown in Table 5-3 when different voltage and resistors are used in external circuit.

External voltage	Non-essential resistance	VL	Output current
3.3V	1KΩ	510mV	2.82mA
5V	1KΩ	742mV	4.31mA
12V	2.4KΩ	795mV	4.68mA
24V	4.7KΩ	850mV	4.97mA

Table 5-3 Opto-isolated output logic's low level parameters

5.8.3 IUX series camera's Input and output I/O circuit (line2/line3)

Non-isolated configurable input, output I/O circuit is shown in Fehler! Verweisquelle konnte nicht gefunden werden., Figure 5-36.

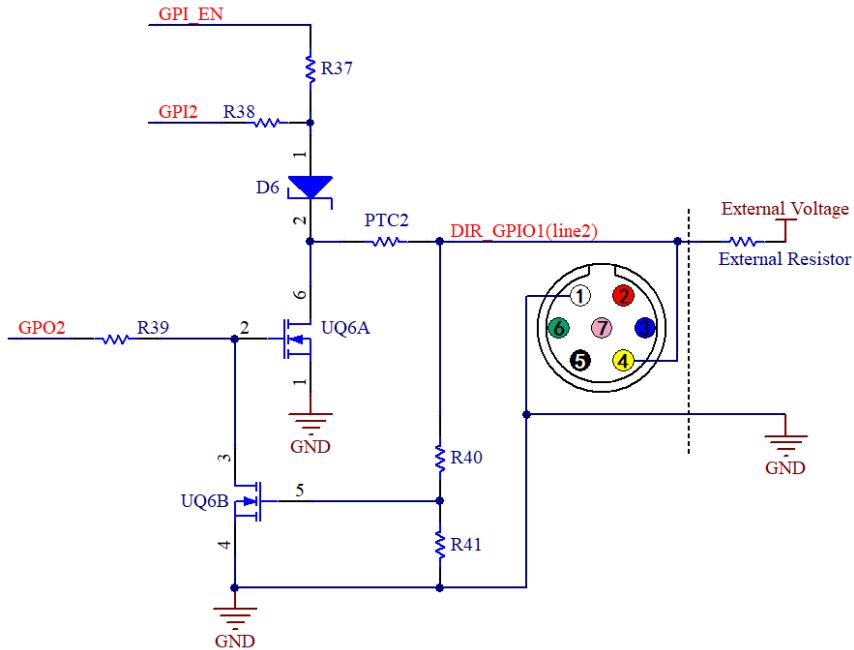

Figure 5-35 Non-isolated configurable input, output I/ O circuit (line2)

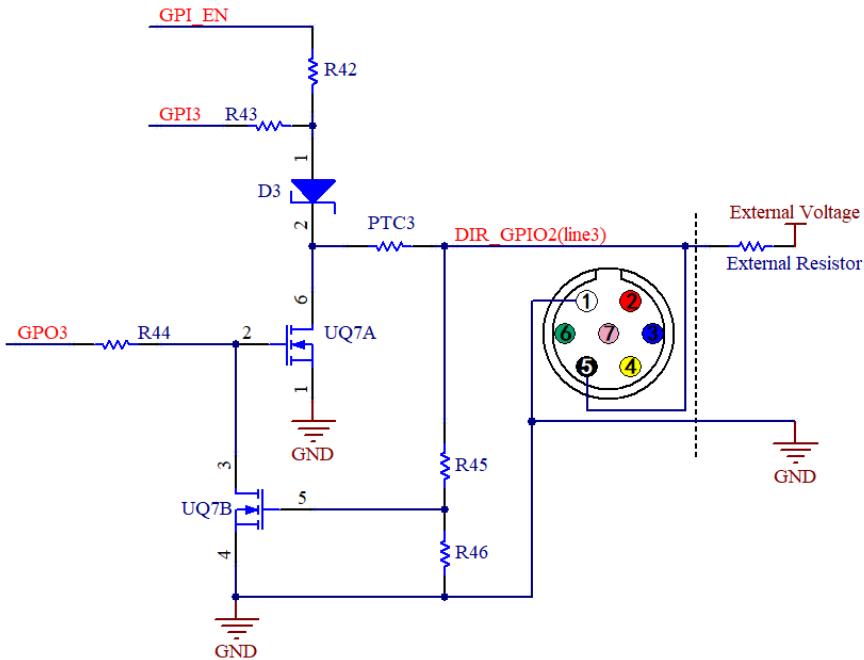

Figure 5-36 Non-isolated configurable input, output I/ O circuit (line3)

1, Line2/line3 set as input pin:

Logic 0 input level: 0-0.6 VDC (DIR_GPIO1/DIR_GPIO2 pin)

Logic 1 input level: 2.0~24VDC (DIR_GPIO1/DIR_GPIO2 pin)

Maximum input current: 25mA

The input level is between 0.6V and 2.0V, the circuit action state is uncertain. Please avoid the input voltage working in this range.

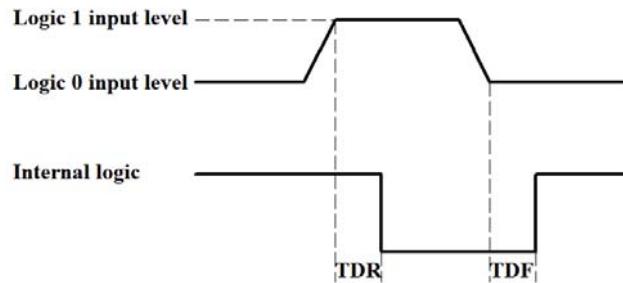

Figure 5-37 Input logic level

To prevent damage to the GPIO pin, connect the GND pin before entering voltage to the Line2 pin.

Input rise delay (TDR): 0.02us

Input drop delay (TDF): 0.02us

2, Line2/line3 set as output pin

The maximum current allowed through this pin is 25 mA.

When the ambient temperature is 25 degrees Celsius, the relationships between the external voltage, resistance and output low level are shown in Table 5-4.

External voltage	Non-essential resistance	VL (GPIO)
3.3V	1KΩ	0.11V
5V	1KΩ	0.167V
12V	2.4KΩ	0.184V
24V	4.7KΩ	0.385V

Table 5-4 Non-isolated output logic's low level parameters

The external pull-up voltage 5V pull-up resistance 1KΩ, GPIO output logic level, electrical characteristics are shown in Fehler! Verweisquelle konnte nicht gefunden werden..

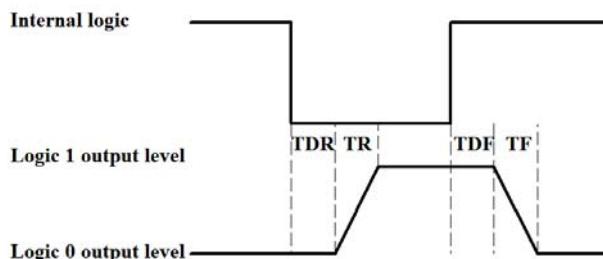

Figure 5-38 Output logic level

Parameter name	Parameter symbol	Parameter values
Output rise time	TR	0.08us
Output downtime	TF	0.02us
Output rising delay	TDR	0.1us
Output drop delay	TDF	0.04us

Table 5-5 Non-isolated output's electrical characteristics

6 Frequently Asked Questions

1. How long does the camera start exposure after triggering?

After receiving the trigger signal, the camera needs to determine the following three parameters: "Trigger Delay", "Debounce Time" and "Strobe Delay Time". As shown in Figure 6-1, the trigger signal is first subjected to a debounce delay and then a trigger delay and if the Strobe is set to a pre-output, a pre-output delay is required.

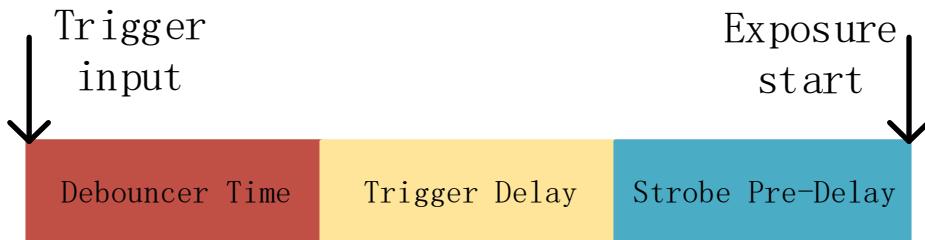

Figure 6-1 Exposure start time

7 Revision History

Item	Version	Date	Revised record
1	1.0.20190402	2019/04/02	•Initial release
2	1.0.20190614	2019/06/14	•Add 0.5M-pixel camera related content •Add the relevant content of the camera with hardware version number V2.0 and above. •Add 4.4 chapters to the GPIO configuration description
3	1.0.20190822	2019/08/22	•Modify 1.3 and 1.4 chapters contents
4	2.0.20191021	2019/10/21
